8.5&10 Ton

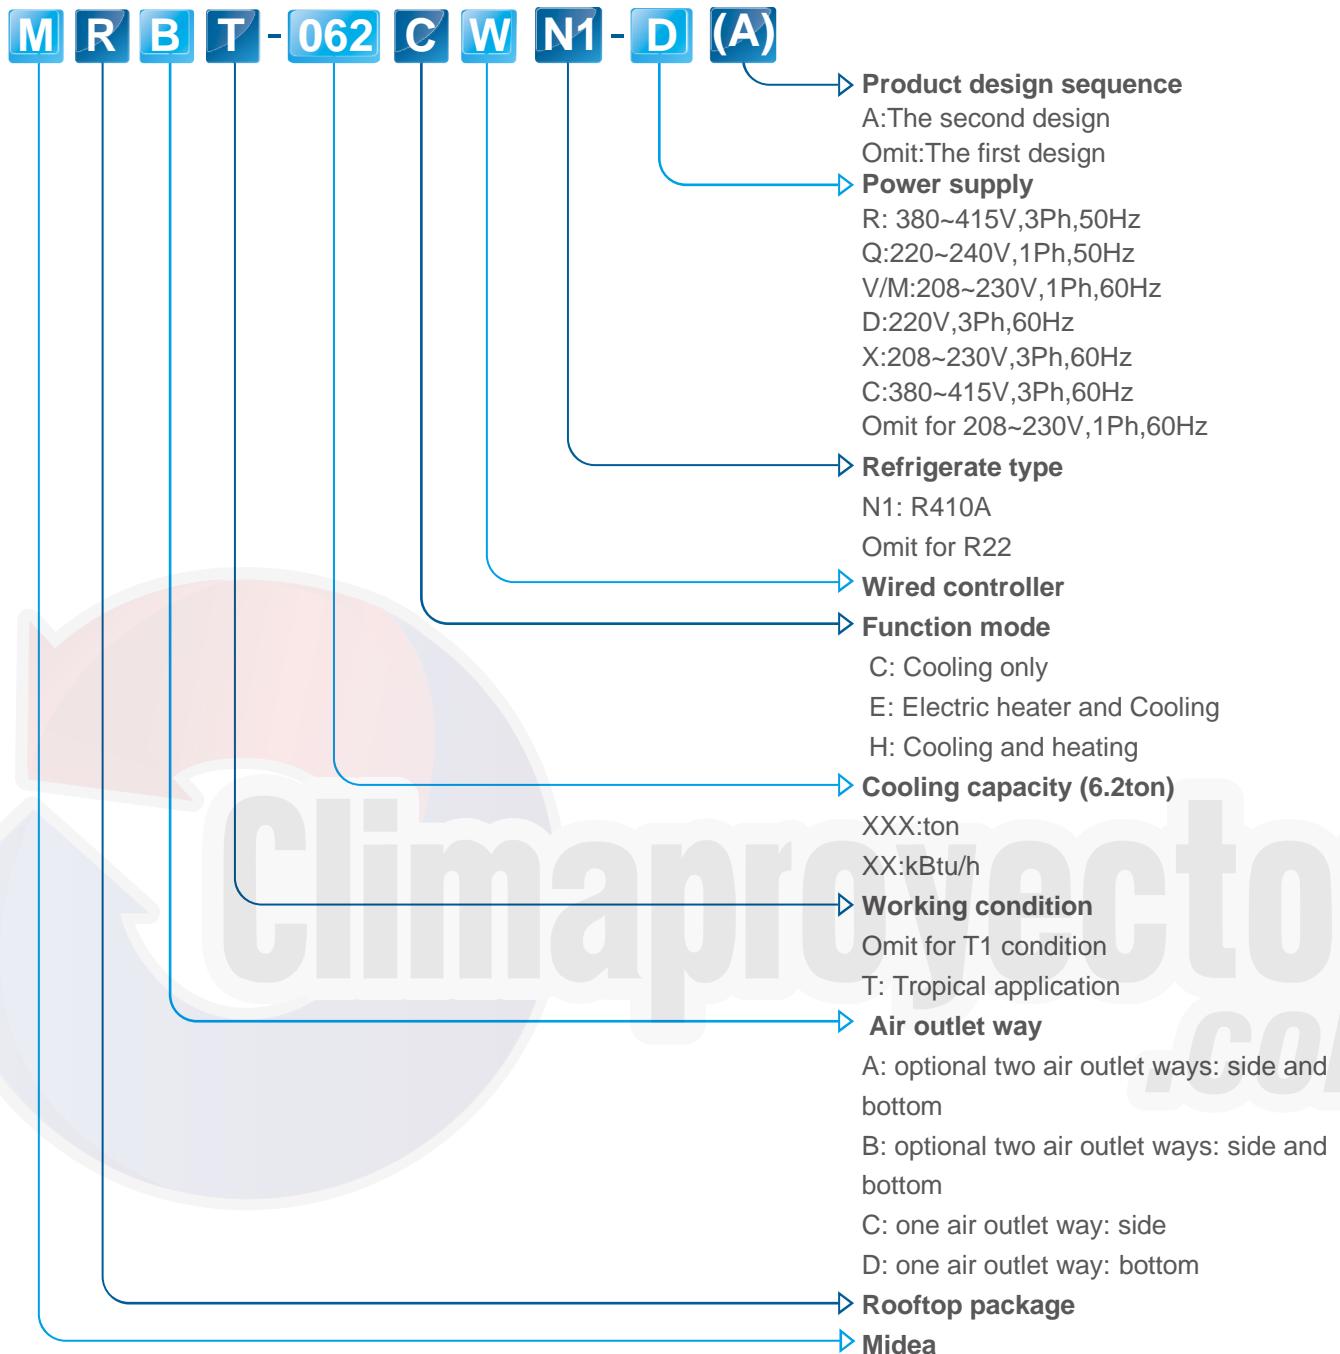

12.5 Ton

15&17.5&20 Ton

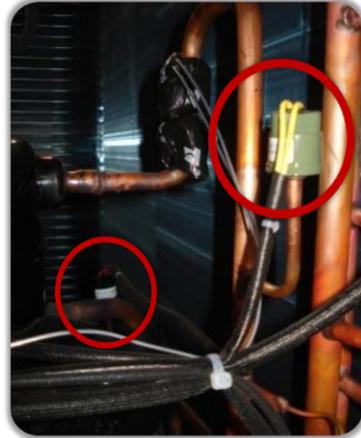

3. Nomenclature

4. Feature & Benefit

1. The adoption of anticorrosive-box

The reinforced anticorrosion by using galvanization armor plate and coated with man-composed paint.
The appearance is stylish and be easy for maintenance.
(It's OK for 1000 hours salt spray test)

2. The adoption of credible protection system

2.1 The protection for compressor

High-pressure protection, low-pressure protection, compressor current protection and so on the series' protectors can ensure compressor operating normally.

Adopts independent system, except for protections of sequence and wire control output, any protection relate to its corresponding compressor. Once a compressor protection energized, the corresponding compressor will stop, others are still working.

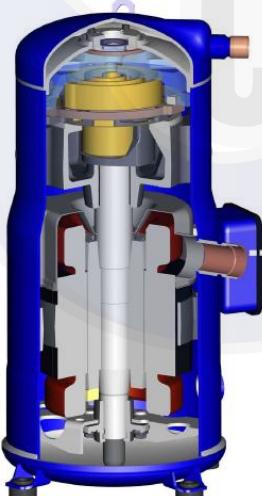

2.2 Fan motor

The fan motors for evaporator have over-heat protection and over-current protection function. The fan motors for condenser have the temperature controller protection function.

3. Energy saving design

3.1 High efficiency compressor

Using technical compressor, heat exchanger and optimum connection pipe, the compressor can startup under low power input. Provide maximum reliability, efficiency and quiet operation.

Two refrigerant circuits on larger units (above 12.5ton) provide efficient part load performance.

Standard low and high pressure safety switches.

Nice compressor control

Compressor staging is controlled directly by the indoor temperature. When the indoor temperature is warmer than the setting, cooling is staged up; when the indoor temperature is cooler than the setting, cooling is staged down. However, a stage change can only occur when the indoor temperature is outside the dead band. Staging is constrained by an inter-stage delay timer. These constraints protect the compressors from short cycling while eliminating temperature variations near the diffusers.

3.2 Condenser

By using high-efficient thin fin, the condenser has high-efficient heat exchanger, the energy waste decreases greatly.

3.3 Evaporator

By using the high-efficient, super thin fin and inner-whorl copper pipe, the evaporators get the higher capacity and the lower noise level.

3.4 The heat insulation of indoor unit

The heat insulation of indoor unit can available decrease heat loss.

3.5 The control and refrigerant cycle system

There are two independent control systems and refrigerant cycle system, the capacity output is adjusted automatically depending on different demand, save energy when one control system is in running according to low capacity output.

4. Optional collocation

4.1 Operation in high temperature

The air-conditioner designed for high temperature can run until the ambient temperature reaches up to 52°C (125°F).

4.2 Strong air flow

Large air volume from the air inlet is forced ventilating by the condenser fan.

4.3 Minimum installation arrangement

The installation is fast and low cost with the easy installation and ready operation.

4.4 Pre-drilled duct flange

Flanges are prepared at the supply and return duct connections so that they can reduce duct connection work at site.

Flange

4.5 Quiet operation

Noise and vibration have been effectively reduced by adopting new style hermetic compressor. The centrifugal fan and fan casing are optimum shaped for efficient and low noise operation.

5. Cabinet

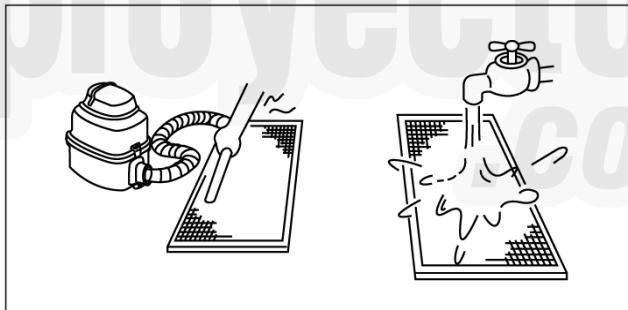

5.1 Sloped drain pan and drain pipe.

5.2 Cabinets have forklift and lifting holes for easy transportation.

5.3 Cabinets have fresh air function, and the filter can be washable.

Fresh air inlet
(except for 5ton)

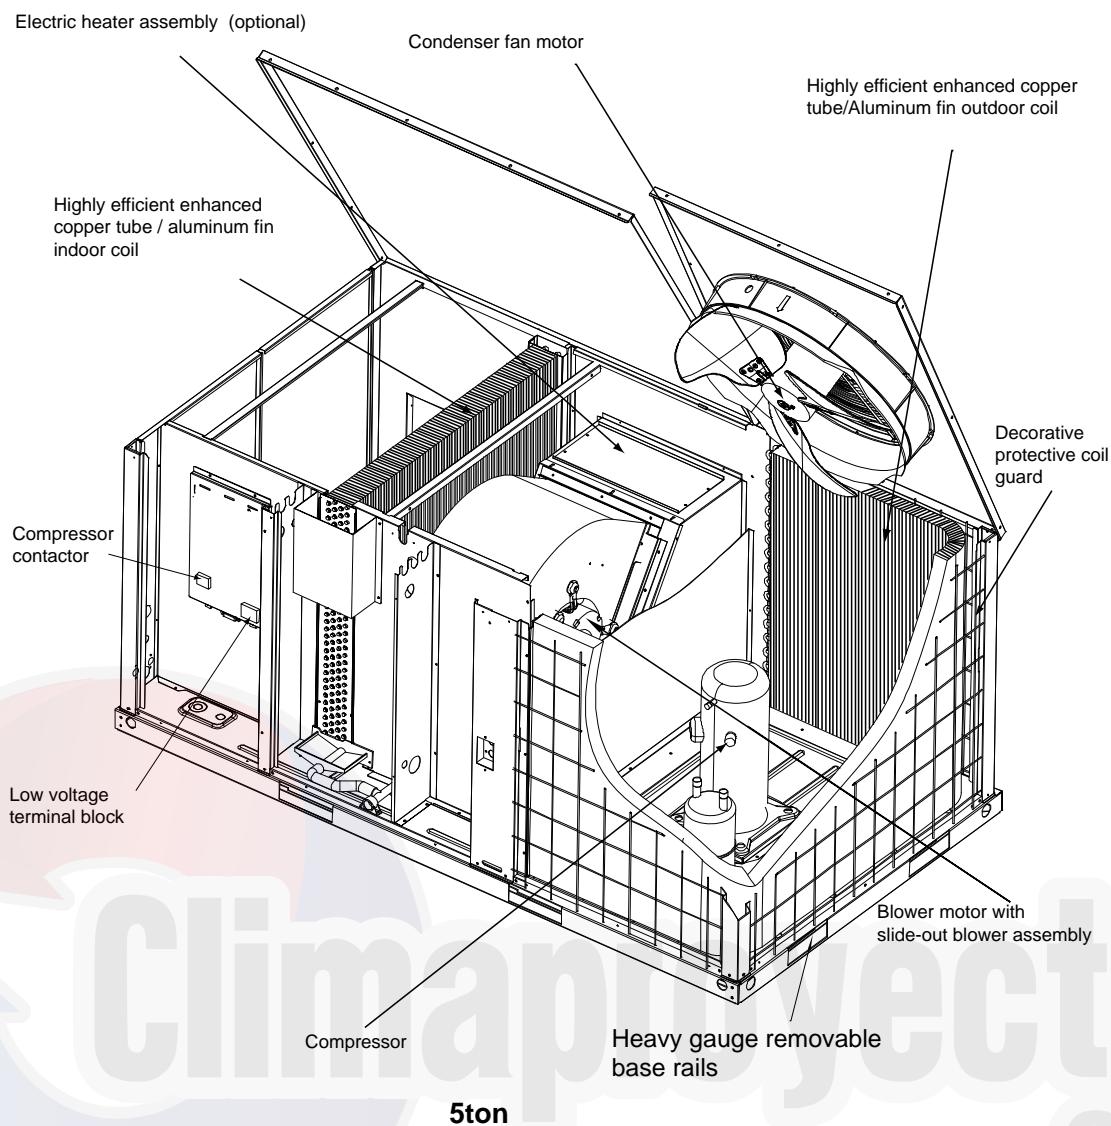

5.4 External pressure gauge port.

The external pressure gauge port, which is identified permanently and clearly the embossed wording, H is high pressure connection and L is low pressure connection. With the gauge port mounted externally, an accurate diagnostic for system operation can be quick and easy without disrupting airflow.

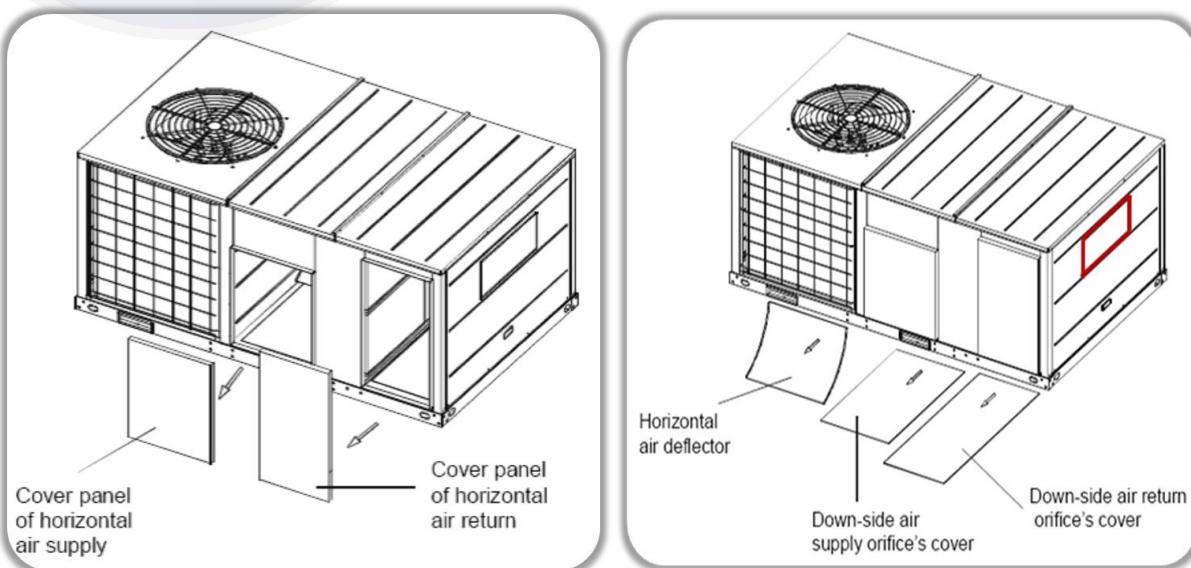

5.5 Durable construction.

Weather-resistant construction with capped seams and sloped top panels. G90 galvanized heavy gauge plate conforming to ASTM-A-653, Zinc content of galvanized plate is 275 g/m².

6. Optional supply/return airflow design, from side or bottom, It could be flexibly applied to multi-position. The rooftop or ground installation is optional.

7. Certification of the compressor

The compressors have CE certified, UL certified.

5. List of Function

5.1 Standard specification

A. General

The Packaged cooling or combination heating and cooling unit is suitable for mounting on the roof or ground. The packaged unit consists of scroll compressors, evaporator coil, condenser coil, control wiring and interconnecting piping- all factories assembled and mounted on heavy gauge G-90 galvanized steel sheet press formed base, ready for field connection to utilities and ducts. The packaged unit is of rigid construction with holes provided in the base rails for overhead rigging. The unit is provided with an integral weather resistant control panel.

These units are rated and tested in accordance with ARI standard 210/ARI 360.

B. Unit enclosure

Panels are of heavy gauge, G-90 galvanized steel sheet with removable access panels, completely weatherized for outdoor installation and properly reinforced and brazed. Panels and access door are provided for inspection and access for all internal parts. Enclosures are provided with adequately reinforced points of support for setting in the unit. Steel sheet panels are zinc-coated and galvanized by the hot dip process of lock forming quality conforming to ASTM A 653 commercial weight G-90, followed by baked on electrostatic polyester dry powder coat paint, on all external panel.

C. Compressor

Compressors are scroll for all the models. They are provided with all the standard controls and accessories necessary for safe operation. These are equipped with internal motor protector; factory installed crank case heater and rubber vibration isolator for quiet and efficient operation.

D. Air-cooled condensing section

1. The air-cooled condensing section is enclosed within the unit housing and consists of condenser coil, fan(s) electric motor(s) and inherently protected compressor(s). As an option, enhanced coated aluminum fins may be provided. Tube support sheets are galvanized steel, formed to provide structural strength.
2. Fans are propeller type, direct driven, upward discharge and provided with fan grille mounted on the casing.
3. Motors are totally enclosed air-over type with class F insulation. Inherent thermal protection is automatic reset type.

E. Evaporator coil section

1. All cooling coils are of enhanced louvered fins and inner grooved copper tubes with wall thickness of 0.3mm, mechanically bonded to aluminum fins. Return bend has 0.022 inch thickness (0.56mm). As option, enhanced coated aluminum fins may be provided. Tube support sheets are galvanized steel, formed to provide structural strength.
2. Drainage pan: An insulated drainage pan made of G-90 galvanized steel is provided, for additional corrosion protection.
3. Insulation: Insulation is supplied in adequate density and thickness for all units to prevent condensation from forming on the unit casing. Insulation meets the requirements of NFPA 90A and is protected against deterioration and erosion from air currents.

F. Evaporator fan

Evaporator fan is of centrifugal forward-curved blade design capable of handling total required CFM and static pressure in the low and the medium ranges. Casings are made of galvanized steel. Blower motors are of open drip proof type (totally enclosed types are optional) and conform to NEMA MG-1 and MG-2. Blower motor is mounted on adjustable base and secured by locking device. Fan wheels shafts and bearing are selected to operate at 25% below first critical speed. Pillow block bearing are selected for at 200,000 hours average life at design operating conditions. Shaft is turned, ground and polished from solid

steel. Fans and pulleys are keyed to shaft and designed for continuous operation at maximum motor horse power and fan speed. All rotating components and assemblies are statically and dynamically balanced and every unit is vibration tested before shipment from the factory.

G. Electronic thermostat

General information: A dedicated electronic thermostat is supplied with unit controls as standard. This thermostat controls one or two stage heating and cooling applications. The thermostat normally displays room temperature and mode of operation.

The temperature can be set by up/down buttons for both cooling and heating cycles. The thermostat also allows you to select continuous fan operation, or have the fan on intermittent operation with the equipment. It also displays the status of unit, thus providing maximum information for the end user.

5.2 Electric heater

Electric heater is the resistance coil type and conforms to the requirement of UL 573 or equivalent. Electrical characteristic, kW capacity and number of stages are indicated. Airflow switch, fusible link and overheat limit thermostat are provided to shut-off power in case of airflow failure/overheat. Electric heater kit is installed as an externally mounted kit at the supply opening.

5.3 Standard feature/option/accessory

Description	Standard feature	Option (factory installed)	Accessory (field installed)
Horizontal discharge	◆		
Compressor crankcase heater	◆		
Evaporator fan-belt driven	◆		
Evaporator fan motor-ODP type(TEFC type optional)	◆		
Condenser fan-direct drive, propeller type(Except 5ton)	◆		
Condenser fan-direct drive, axial type(Only 5ton)	◆		
Condenser fan motor-totally enclosed air-over type	◆		
Electric heater		◆	◆
Filter, Nylon(Thickness 10&12.5mm, except 5ton)	◆		
Filter, aluminum(Thickness 25mm)		◆	
Compressor overload protection	◆		
Low pressure switch	◆		
High pressure switch	◆		
Cooling & heating thermostat	◆		
Condenser fan guard	◆		
Condenser coil guard	◆		
Wired controller KJR-23B			◆
Wired controller KJR-25B			◆
Wired controller KJR-12B	◆		
Drainage pipe			◆
Drainage outlet			◆
Snap ring			◆

MCA: Min. Current Amps. (A)**TOCA:** Total Over-current Amps. (A)**MFA:** Max. Fuse Amps. (A)**STC:** Starting Current (A)**RNC:** Running Current (A)**IPT:** Input (kW)**Note:**

- These data are based on the following conditions:

Evaporator Air Input Temperature 85°F DB, 66 °F WB.

Condenser Air Input Temperature 115°F DB.

- The starting current is indicated for each compressor motor.

- The maximum currents of the compressor can be estimated as follows.

	One compressor unit	Two compressor unit
Max. current	RNC×Max. IPTx/IPT	RNC×Max. IPTx/IPT
Max. instantaneous current	STC	STC+RNC×0.5×Max. IPTx/IPT

Max. IPTx: Compressor power input from the performance table at the expected maximum condition**STC, IPT, RNC:** Compressor data from the above table

- The data in the compressor motor column shall indicate the respective values of the refrigeration cycle. 他 the voltage imbalance is to be <2% between phases.

13. Operation Limit

13.1 Cooling only and cooling with auxiliary heater

Model	Temperature	Outdoor temperature	Indoor temperature
	Cooling mode	18°C~52°C	17°C~30°C
With auxiliary electric heater models		--	17°C~30°C

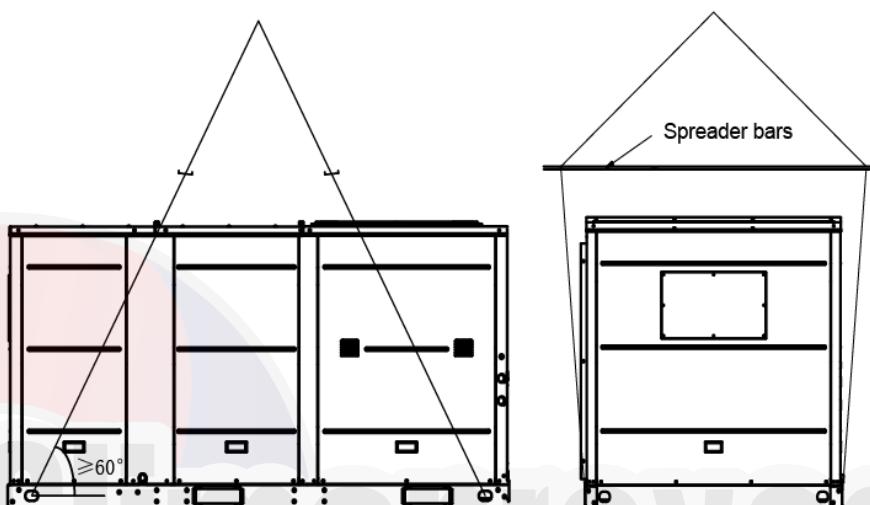

14. Installation

14.1 Lifting

Rigging cables should have adequate capability to resist 3 times weight of unit. Before lift, please check and ensure that hooks are holding tightly to unit and lifting angles are no less than 60°.

Cloth material or hard-paper should be padded in the contact place between unit and rigging cable. Rigging cable should be entwined a round at the hook to forbid danger because of weight unbalance.

During lifting, anyone forbidden lingering under the lifting unit.

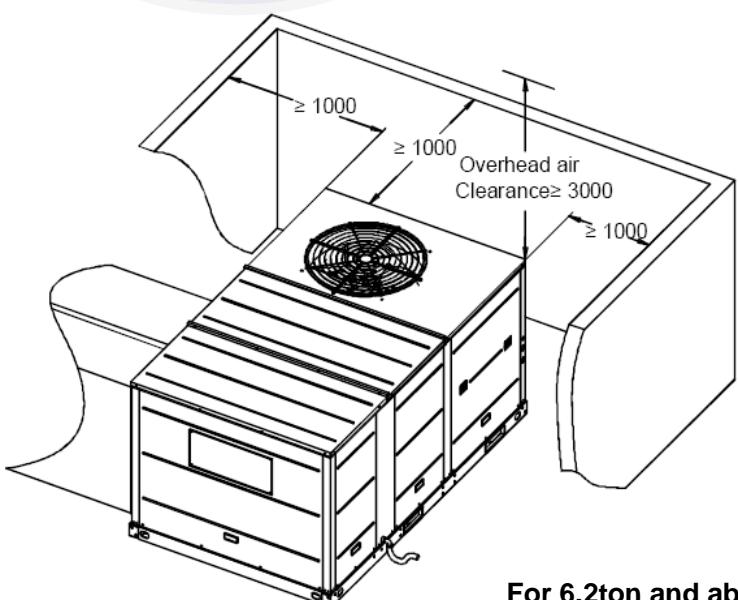

14.2 Service Space

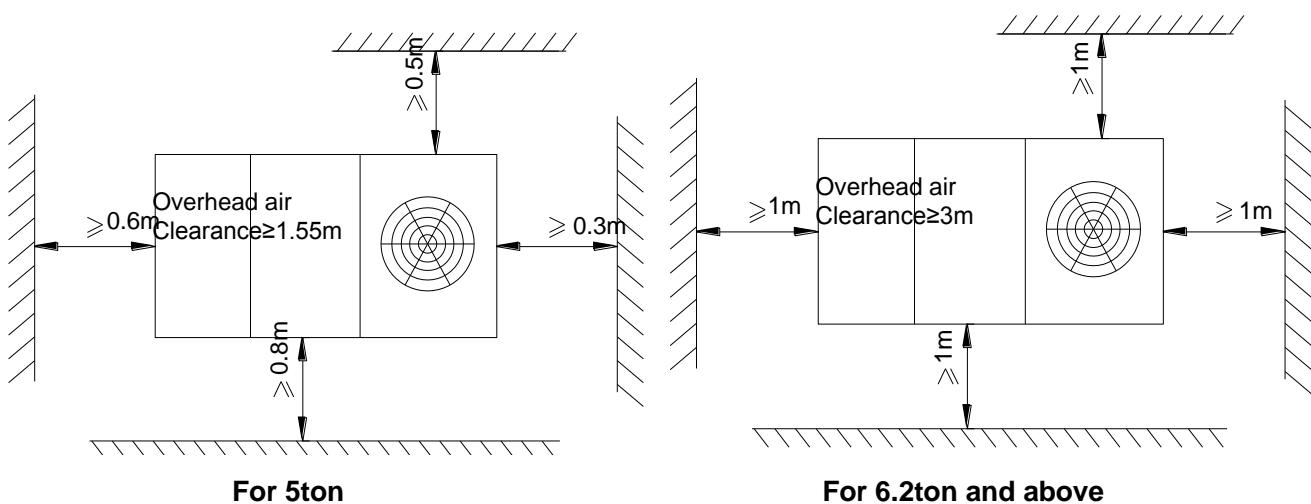

1. The recommended clearances for single-unit installations are illustrated in following Fig.

These minimum requirements are not only an important consideration when determining unit placement, but they are also essential to ensure adequate serviceability, maximum capacity, and peak operating efficiency.

2. Any reduction of the unit clearances indicated in these illustrations may result in condenser coil starvation or the recirculation of warm condenser air. Actual clearances which appear to be inadequate should be reviewed with a local engineer.

For 6.2ton and above

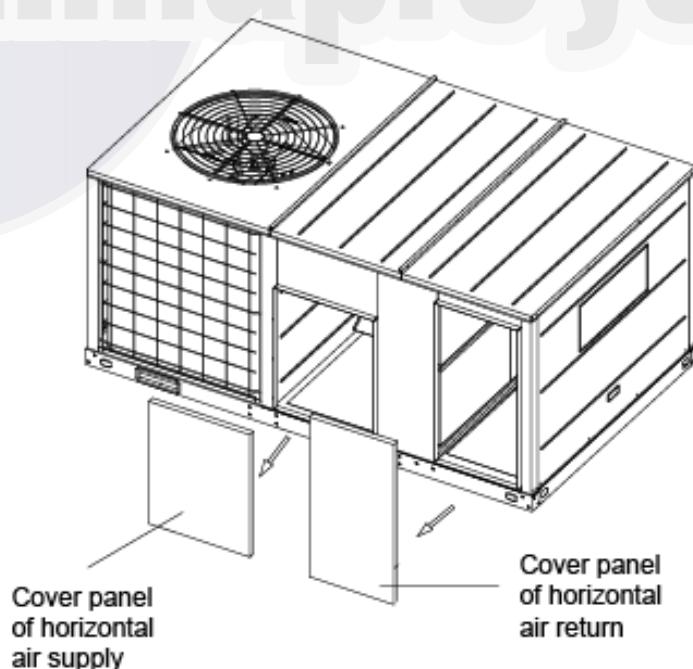

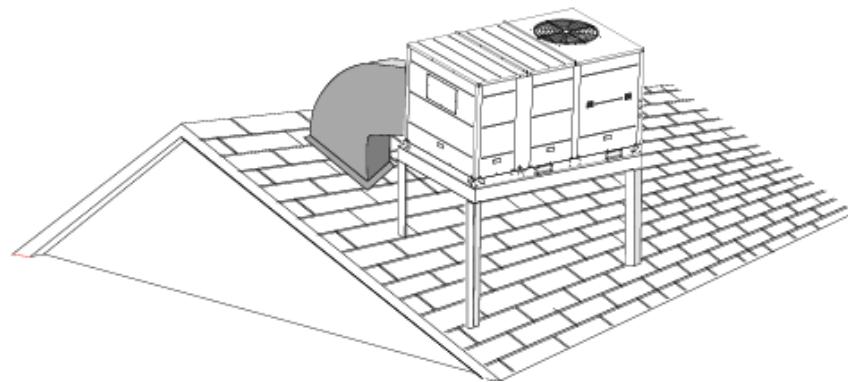

14.3 Rooftop -- unit

For roof top applications using a field fabricated frame and ducts, according to the following procedure:

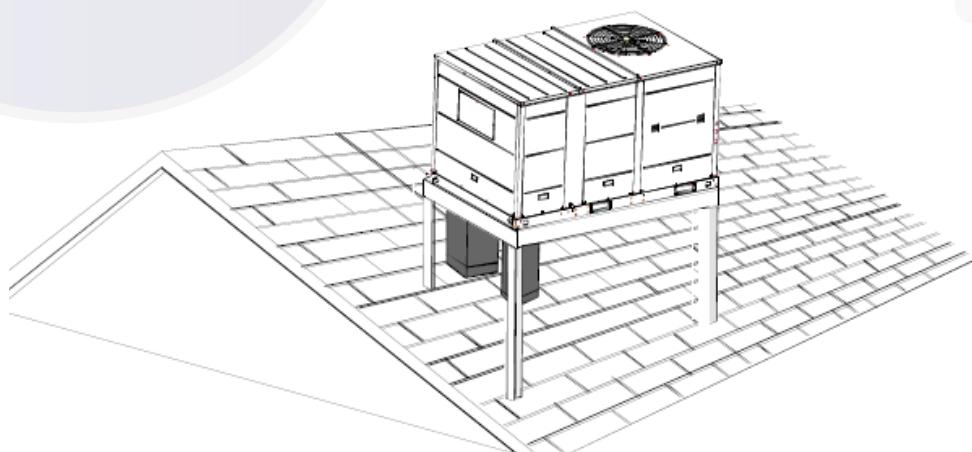

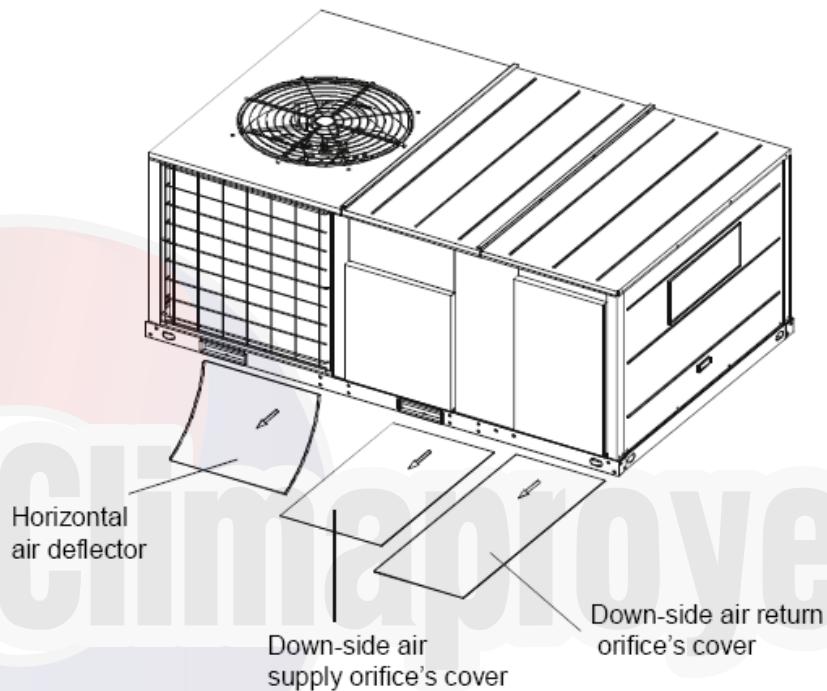

- 1) The frame must be located and secured by bolting or welding to the roof. Flashing is required.
- 2) The hole in the roof must be prepared in advance of installing the unit.
- 3) Secure the ducts to the roof.
- 4) Place the unit on the frame or roof curb.
- 5) Secure the unit to the frame or roof curb.
- 6) Insulate any ductwork outside of the structure with at least two (2) inches of insulation and then weatherproof. There must be a weatherproof seal where the duct enters the structure.
- 7) Complete the installation according to the instructions.

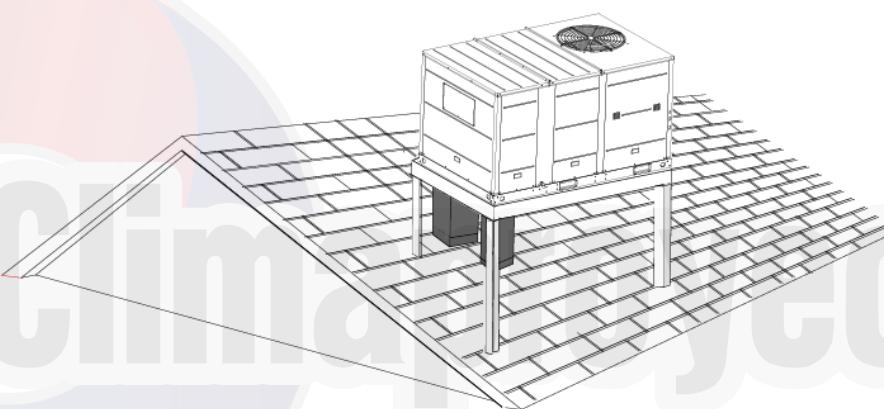

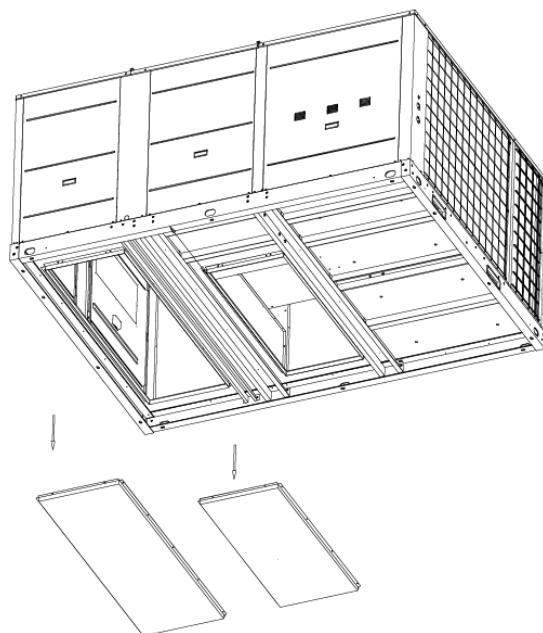

Typical rooftop application with frame:

Typical rooftop application with frame:

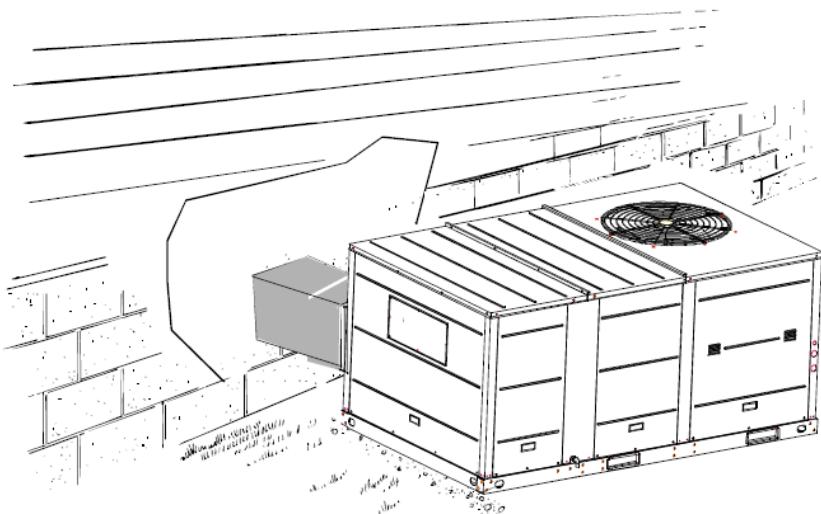

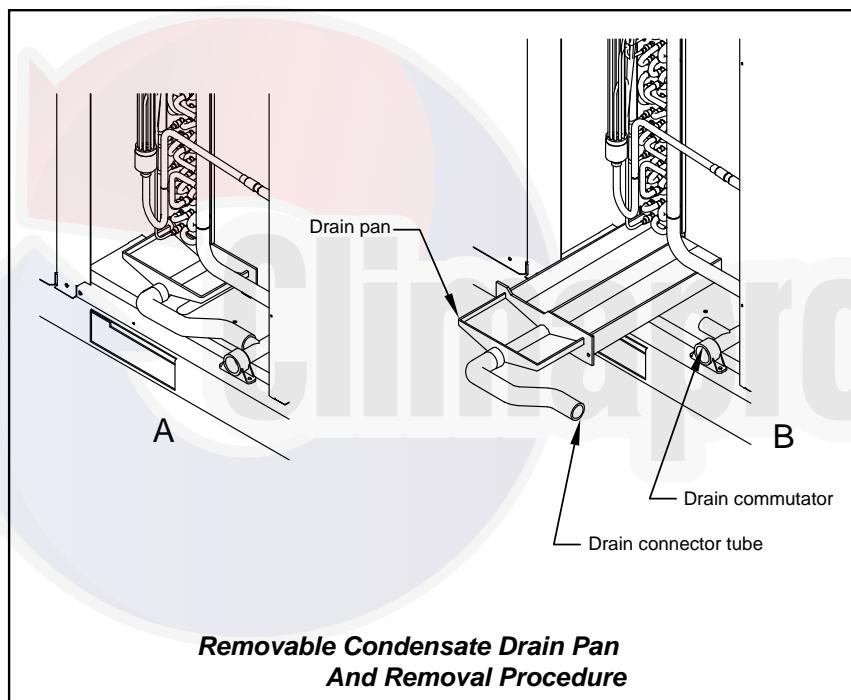

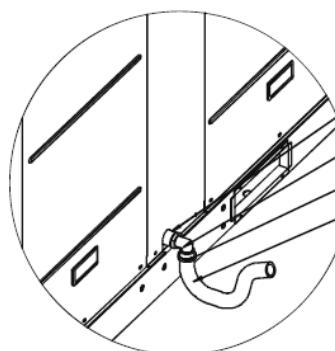

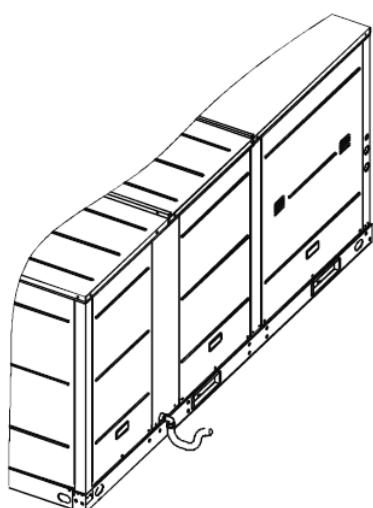

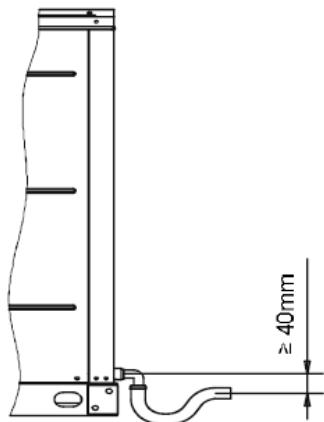

14.4 Ground Level -- Horizontal Units

For ground level installations, the unit should be positioned on a pad the size of the unit or larger. The unit must be level on the pad. The pad must not come in contact with the structure. Be sure the outdoor portion of the supply and return air ducts are as short as possible.

Installation according to the following procedure:

- 1) Place the unit on the pad.
- 2) Attach the supply and return air ducts to the unit.
- 3) Insulate any ductwork outside of the structure with at least 2 inches of insulation and weatherproof. There must be a weatherproof seal where the duct enters the structure.
- 4) Complete the installation according to the instructions.

Typical ground level application:**14.5 Installation of condensate drain piping****5ton:****6.2&7.5&8.5&10&12.5&15&17.5&20ton:****Outer diameter:28 mm/1.1 inch****Inner diameter:21 mm/0.83 inch**

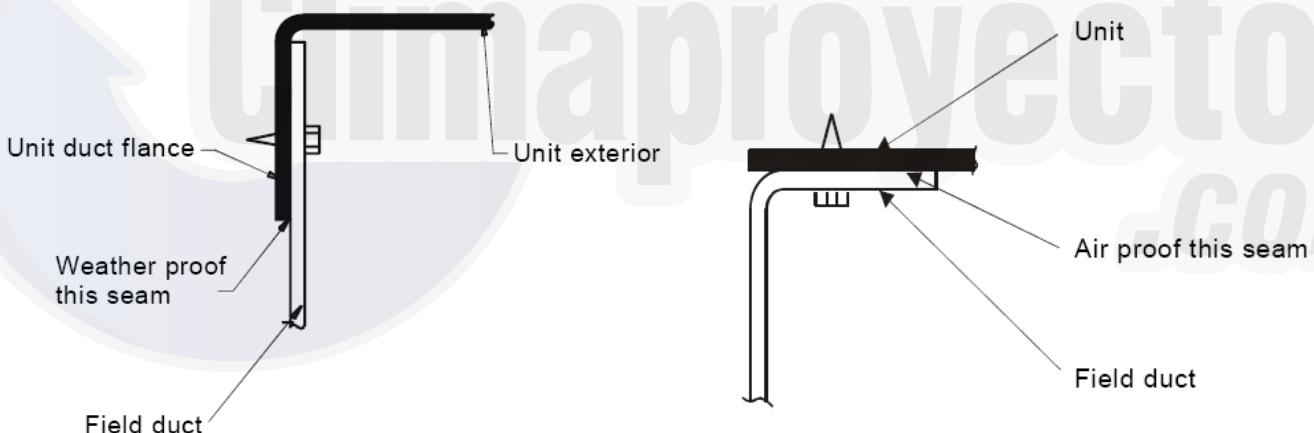

14.6 Ductwork

1. Attaching horizontal ductwork to unit

- 1) All conditioned air ductwork should be insulated to minimize heating and cooling duct losses. Use a minimum of two (2) inches of insulation with a vapor barrier. The outside ductwork must be weatherproofed between the unit and the building.
- 2) When attaching ductwork to a horizontal unit, provide a flexible watertight connection to prevent noise transmission from the unit to the ducts. The flexible connection must be indoors and made out of heavy canvas.

Note:

Do not draw the canvas taut between the solid ducts.

2. Attaching down flow ductwork to roof curb

Supply and return air flanges are provided on the roof curb for easy duct installation. All ductwork must be run and attached to the curb before the unit is set into place.

Follow these guidelines for ductwork construction:

- 1) Connections to the unit should be made with three-inch canvas connectors to minimize noise and vibration transmission.
- 2) Elbows with turning vanes or splitters are recommended to minimize air noise and resistance.
- 3) The first elbow in the ductwork leaving the unit should be no closer than two feet from the unit, to minimize noise and resistance.

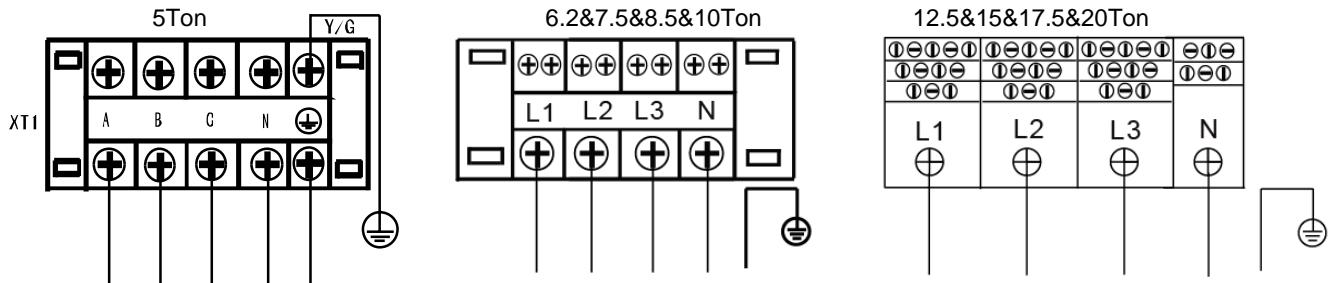

14.7 Wiring provision

Field wiring

The units are internally wired at the factory according to generally accepted electrical technology.

Required field wiring

Main power wiring to the unit control wiring between the control center and the unit, and earth wiring are required in the field.

Required components

The following components are required: main power fuse, conduit coupling, and field supplied room thermostat.

Wire and fuse size selection for main power source.

The wire and fuse size should be selected in accordance with national standard, taking the designed maximum current shall be the total of the compressor maximum current, condenser fan motor current and evaporator fan motor current (refer to "electrical data").

Wire size between room thermostat and unit.

The wire size between the room thermostat and the unit should be determined according to the following table, because the 24V power source is applied to the control circuit.

	Wiring length between room thermostat and unit(one way)				
	10m	15m	20m	30m	40m
Minimum wire size(mm^2)	0.5	0.5	0.75	0.75	1.0

15 Wired Controller

15.1 Standard wired controller: KJR-12B/DP (T)-E

KJR-12B/DP (T)-E

1. Safety precaution

The following contents are stated on the product and the operation manual, including usage, precautions against personal harm and property loss, and the methods of using the product correctly and safely. After fully understanding the following contents (identifiers and icons), read the text body and observe the following rules.

Identifier description

Identifier	Meaning
⚠ Warning	Means improper handling may lead to personal death or severe injury.
⚠ Caution	Means improper handling may lead to personal injury or property loss.
[Note]: 1. "Harm" means injury, burn and electric shock which need long-term treatment but need no hospitalization	
2. "Property loss" means loss of properties and materials.	

■ Icon description

Icon	Meaning
🚫	It indicates forbidding. The forbidden subject-matter is indicated in the icon or by images or characters aside.
❗	It indicates compulsory implementation. The compulsory subject-matter is indicated in the icon or by images or characters aside.

Warning

⚠ Warning	Delegate installation	Please entrust the distributor or professionals to install the unit. The installers must have the relevant know-how. Improper installation performed by the user without permission may cause fire, electric shock, personal injury or water leakage.
-----------	-----------------------	-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

🚫 Usage Warning	Forbid	Do not spray flammable aerosol to the wire controller directly. Otherwise, fire may occur.
	Forbid	Do not operate with wet hands or let water enter the wire controller. Otherwise, electric shock may occur.

2. Summarize

Usage condition:

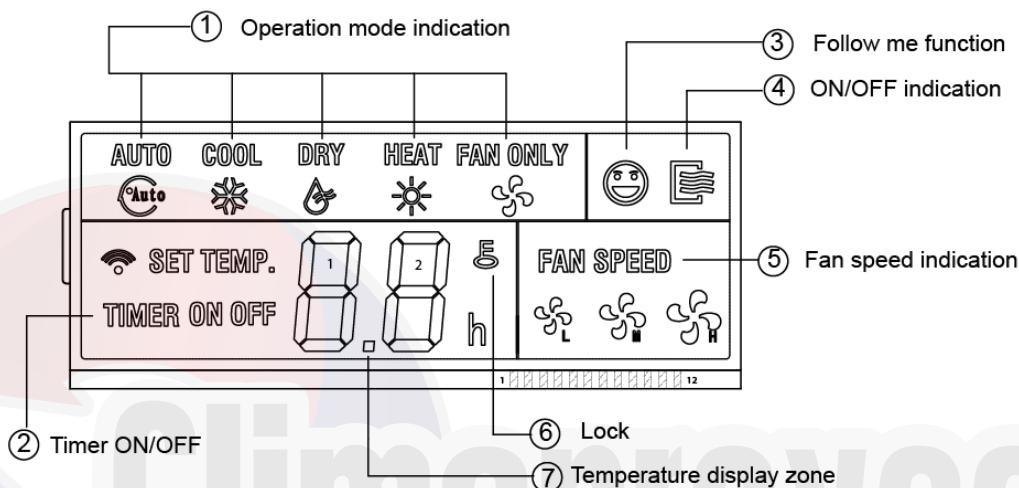

- ①. Power supply: 5V DC.
- ②. Operation temperature: -15°C--+43°C.
- ③. Operation humidity: 40%-90%, RH.

3. Function summary

Main function:

- ④. Connecting to indoor unit by A, B, C, D, E terminal;
- ⑤. Button setting action mode.
- ⑥. LCD display.
- ⑦. Timer for rest time.

4. Name and fuction of indica tors on the controller

① Operation mode indication:

When press "MODE" button, the following mode can be selected in circle. Auto→Cool →Dry→Heat→Fan only→Auto. For cooling only model,heat mode is skipped.

② Timer :

When adjust setting on time or only on time is set, the "ON" is lighted.

When adjust setting off time or only off time is set, the "OFF" is lighted. If both 'on' and 'off' timer are set, both the "ON" and "OFF" are lighted.

③ Follow me function:

There is a temperature sensor inside the wired controller, after setting temperature, it will compare the two temperatures, and the space of wired controller will be the same as setting temperature. It is available under cooling, heating, auto mode.

④ ON/OFF indication :

When it is on, the icon display, otherwise it is extinguished.

⑤ Fan speed indication :

There are four fan modes: low, middle, high and auto. For some models, no middle fan then the middle fan is seen as high speed. The function is not suitable for the rooftop package units.

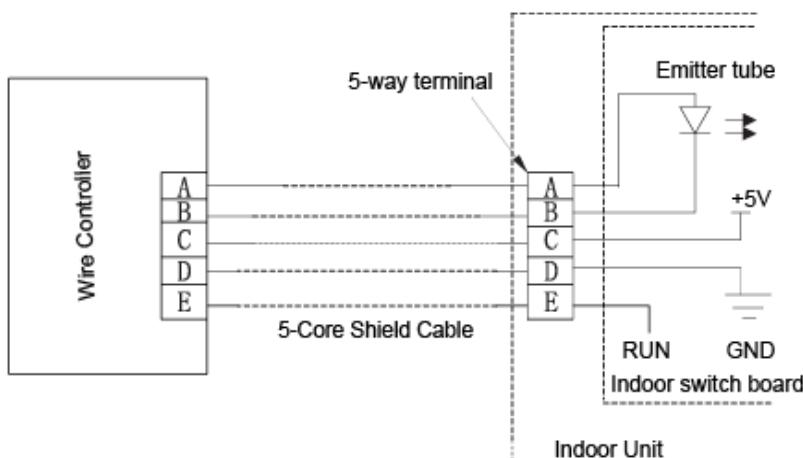

⑥ Lock:

When the "LOCK" button is pressed, the icon appear and other buttons is unable, press again, the icon disappear.

⑦ Temperature display zone:

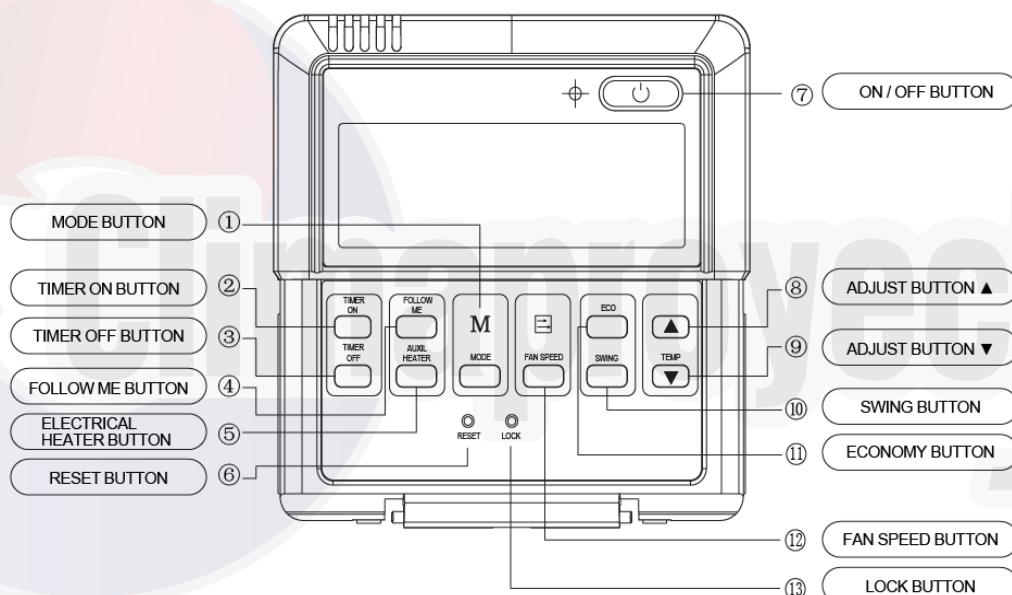

Generally it displays setting temperature, it can be adjusted by press temperature button ▲ and ▼. But for fan mode, no display is here.

5. Installation method

When a wired controller is needed, a small 5-way terminal should be added. Fix an infrared emitter with gum water near the receiver on the switch board. Connect its anode and cathode to A and B, and +5V, GND, RUN to C, D, E on the switch board.

6. Name and operation of the button on the wired controller

① Mode button:

When press this button, the operation mode change as the following sequence:

→AUTO → COOL → DRY → HEAT → FAN

Remark: For the cooling only model, the heating mode is skipped.

② Timer on button :

Press this button, timer on function is active. Then every press, the time increase 0.5h, after 10h, 1h increase after each press. If cancel this Function, just set it to "0.0".

③ Timer off button:

Press this button, timer off function is active. Then every press, the time increase 0.5h, after 10h, per 1h increase after each press. If cancel this function, just set it to "0.0".

④ Follow me button:

When under cool, heat and auto mode, press this button, follow me function is active. Press again, this function is ineffective.

⑤ Electrical heater button :

If press this button in heat mode, electrical heater function become ineffective.

⑥ Reset button(hidden):

Use a 1mm stick to press in the little hole , then the current setting is canceled . The wired controller will enter into original state.

⑦ON/OFF button:

When in off state, press this button, the indicator is on, the wired controller enter into on state, and send setting information to in door PCB. When in on state, press this button, the indicator is off, and send instruction. If timer on or timer off has been set, it cancel this setting then send instruction to stop the machine.

⑧ Adjust button ▲:

Set indoor temperature up. If press and hold on, it will increase at 1 degree per 0.5 second.

⑨ Adjust button ▼ :

Set indoor temperature down. If press and hold on, it will decrease at 1degree per 0.5 second.

⑩ Swing button:

First pressing: start swing function; second pressing: stop swing. (Match to some model with swing function).

⑪ Economy operation button:

Press this button, the indoor unit operates in economy mode, press it again, exit this mode (it may be ineffective for some models)

⑫ Fan speed button:

Press this button consecutively, the fan speed will circle as follow:

**⑬ Lock button (hidden):**

When you push the LOCK button, all current settings are locked in and the wired controller does not accept any operation except that of the LOCK button. Use the lock mode when you want to prevent setting from being changed accidentally or play fully. Push the LOCK button again when you want to cancel the LOCK mode.

7. Using method

Automatic operation

Connect to power, indoor operation lamp flash.

- ①. Press "MODE" button, select " AUTO " ;
- ②. Press the button "▲" and "▼", set temperature you want, generally it is among 17°C~30°C;
- ③. Press "ON/OFF" button, operation lamp is on, the air-conditioner work in auto mode, indoor fan is auto, and cannot be changed. Auto is displayed on LCD. Press " ON/OFF" button again to stop.
- ④. Economy operation is valid in auto mode.

Cool/Heat/Fan mode operation

- ①. Press "MODE" button, select "COOL", "HEAT" or "FAN ONLY" mode.
- ②. Press temperature adjust button to select setting temp..
- ③. Press "FAN SPEED" button to select high/mid/low/auto.
- ④. Press "ON/OFF" button, indoor unit operation lamp on, it works in selected mode. Press "ON/OFF" button again, it stops to work.

Remark: When in fan mode, no temperature can be set.

Dry operation

- ①. Press "MODE" button, select "DRY" mode.
- ②. Press temperature adjust button to select setting temp.
- ③. Press "ON/OFF" button, indoor unit operation lamp on, it works in dry mode. Press ON/OFF button again, it stops to work.
- ④. In dry mode, economy operation and fan speed are ineffective.

Timer setting

Timer on only:

- ①. Press "TIME ON" button, it display "SET" on LCD, and display "H" and "ON" , it is waiting for timer on setting.
- ②. Press "timer" on button repeatedly to adjust time setting.
- ③. If press this button and hold on, the time will increase at 0.5h, after 10h, it increases at 1h.
- ④. After setting 0.5 second, the wired controller send timer on information, it is finished.

Timer off only:

- ①. Press "TIME OFF" button, it display "SET" on LCD, and display " H " and ON, it is waiting for timer on setting.
- ②. Press "TIME OFF" button repeatedly to adjust time setting.
- ③. If press this button and hold on, the time will increase at 0.5h, after 10h, it increases at 1h.
- ④. After setting 0.5 second, the wired controller send timer off information, it is finished.

TIMER ON AND TIMER OFF BOTH

- ①. Set timer on time as the corresponding step1 and 2.
- ②. Set timer off time as the corresponding step1 and 2.
- ③. Timer off time must be longer than timer on time.
- ④. 0.5 second after setting, the wired controller send information, the setting is finished.

Change timer

If there is a timer of changing time to be need, press corresponding button to revise it. If cancel timer, change time to 0.0.

NOTE: The timer time is relative time, that is delay after setting time (i, e: setting time is 8:05 A,M). So when timer is set, the standard time cannot be adjusted.

8. Technical indication and requirement

EMC and EMI comply with the CE certification requirements.

15.2 Optional wired controller:

KJR-23B: For cooling only and cooling with auxiliary heater

KJR-25B: For Cooling and heating

KJR-23B

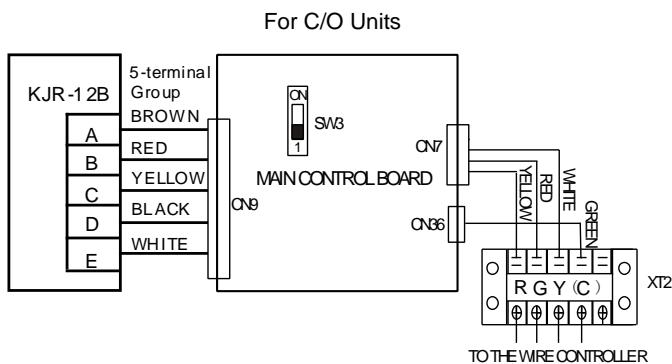

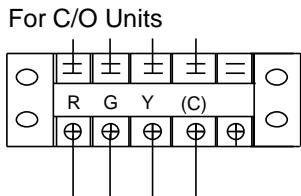

KJR-25B

15.3 Field wiring

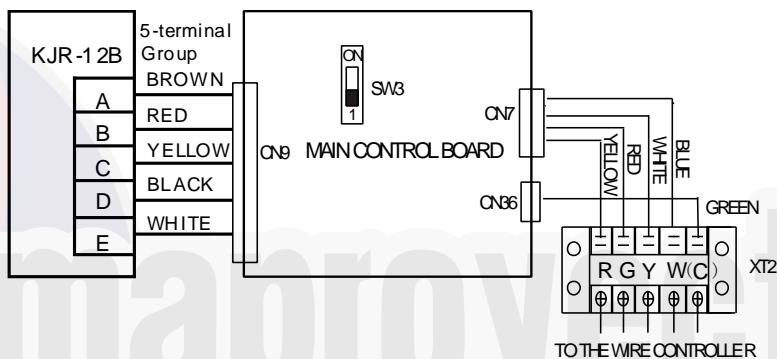

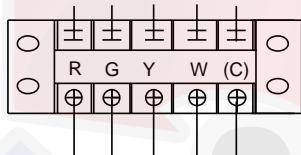

To connect with wired controller

The wired controller KJR-12B can be used when the SW3 is on “on”, if the SW3 is on ‘1’, the wired controller KJR-23B or KJR-25B can be used. After setting, please shut off the power supply and then power to it again, otherwise, the new setting function will be invalid

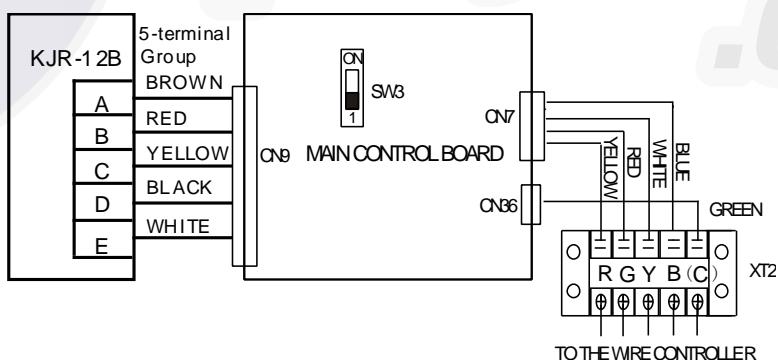

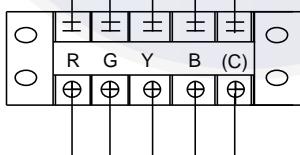

For Cooling Units

For Cooling +EAH Units

For Heating &cooling Units

Remark: Two stage capacity controlling is optional.

16. Error Code

16.1 Error Code for 5ton

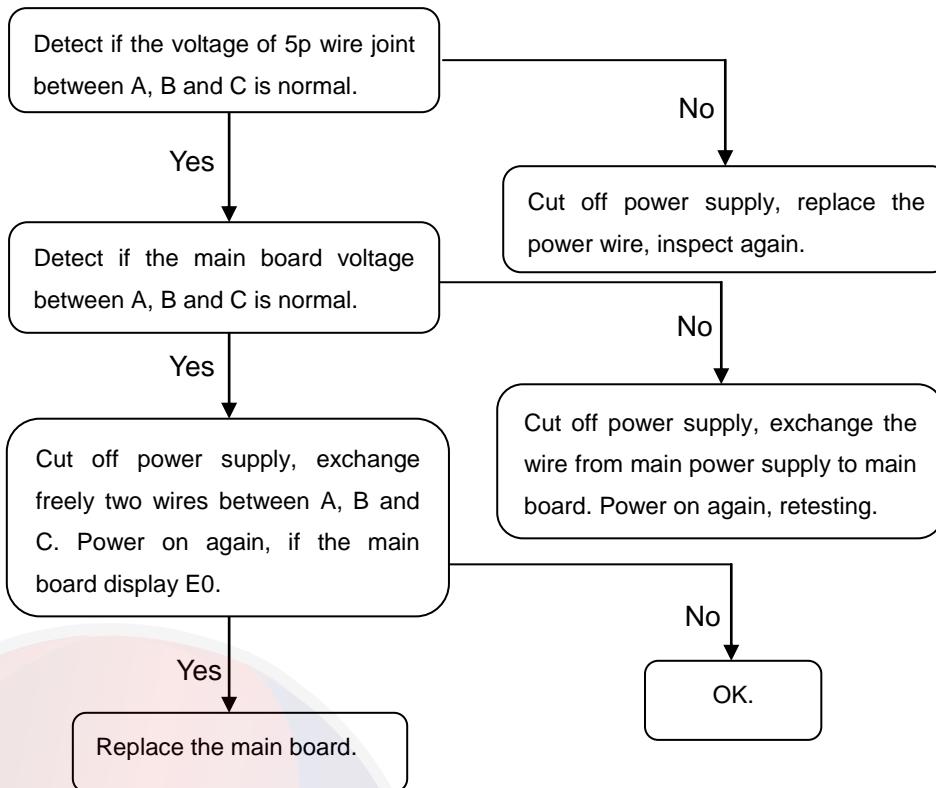

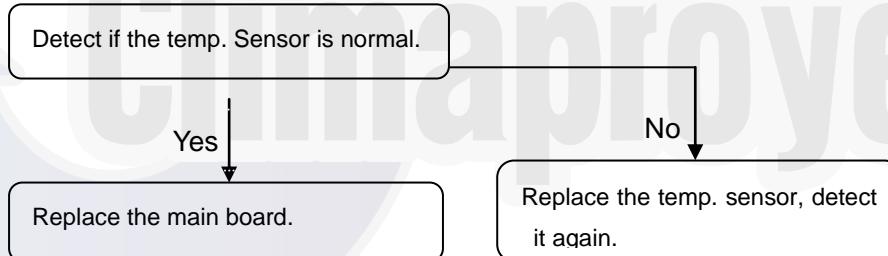

Type	Content	Code	Remarks
Normal	Standby	--	
Normal	Constraint cooling	On	
Normal	Running	10.	
Error	Compressor phase sequence error or phase default	E0	Manual reset
Error	Outdoor coil temp. sensor T3-1 default	E1	Manual reset
Error	Outdoor coil temp. sensor T3-2 default	E2	Manual reset
Error	Indoor coil temp. sensor T2-1 default	E5	Manual reset
Error	Indoor coil temp. sensor T2-2 default	E6	Manual reset
Error	High, low pressure protection or discharge temperature protection of system A reached 3 times	E7	Unit shall be power off to recovery
Error	High, low pressure protection or discharge temperature protection of system B reached 3 times	E8	Unit shall be power off to recovery
Error	Indoor temp. sensor T1 error	E9	Manual reset
Error	Outdoor ambient temp. sensor T4 error	EA	Manual reset
Error	Wired controller output error	Eb	Manual reset
Protection	Over current protection	P0	Auto reset
Protection	Comprehensive protection for outdoor fan	P3	Auto reset
Protection	Protection for High/Low Pressure or exhaust temp. (System 1)	P4	Auto reset
Protection	Protection for High/Low Pressure or exhaust temp. (System 1)	P5	Auto reset
Protection	Protection for High temperature of the outdoor condenser	P8	Auto reset

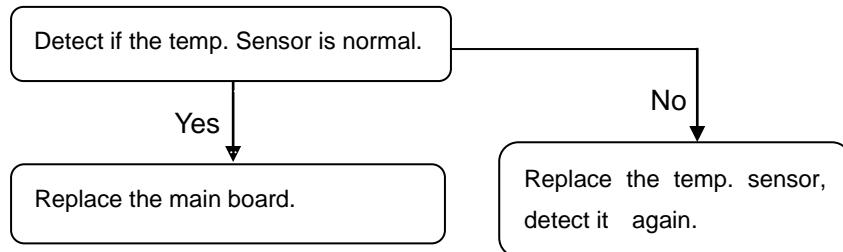

Error code for 6.2ton and above

Type	Content	Code	Remarks
Normal	Standby	--

16.2 Trouble shooting**For 5ton**

Item	Content	Error code
1	Compressor phase sequence error or phase default	E0
2	Outdoor coil temp. sensor T3-1 default	E1
3	Outdoor coil temp. sensor T3-2 default	E2
4	Indoor coil temp. sensor T2-1 default	E5
5	Indoor coil temp. sensor T2-2 default	E6
6	Indoor temp. sensor T1 error	E9
7	Outdoor ambient temp. sensor T4 error	EA
8	Wired controller output error	Eb
9	Over current protection	P0
10	Comprehensive protection for outdoor fan	P3
11	Protection for High/Low Pressure or exhaust temp.	P4

E0: Compressor phase sequence error or phase default**1) E1: Outdoor coil temp. sensor T3 default.**

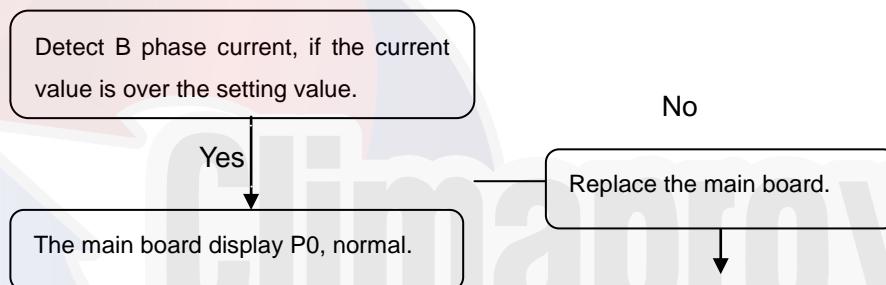

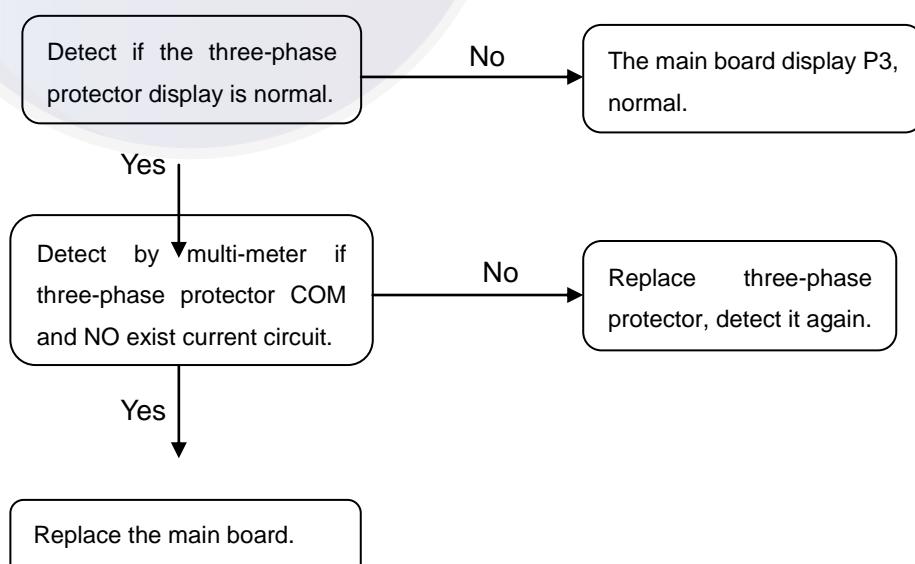

2) E9: Indoor coil temp. sensor T2 default.(Indoor temp. and Pipe Temp. Sensor Resistance Value Table, see **Appendix 2**)

3) When E2,E5,E6 or EA displays, please check the wired nameplate, if the terminals of T2_1、T2_2、T3_2、T4 are connected as short circuit. If no, please connect all as short circuit, unless replace main board.

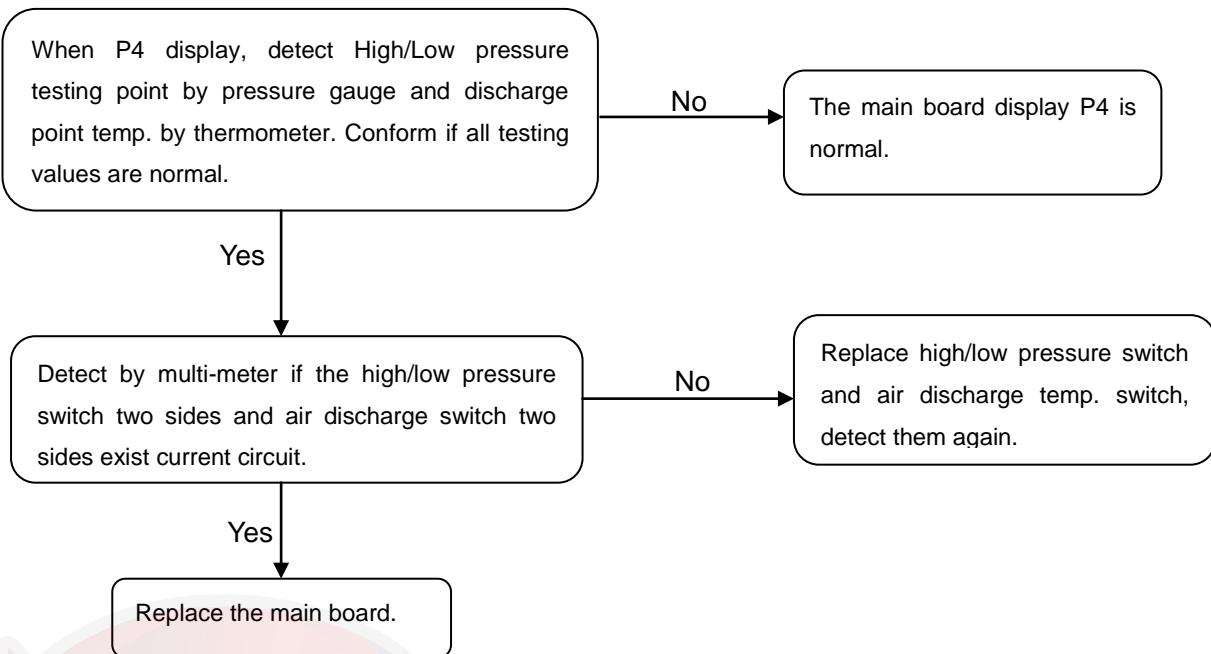

4) Eb: Wired controller output error.(Only for KJR-23B or KJR-25B).

Avoid three conditions as following:

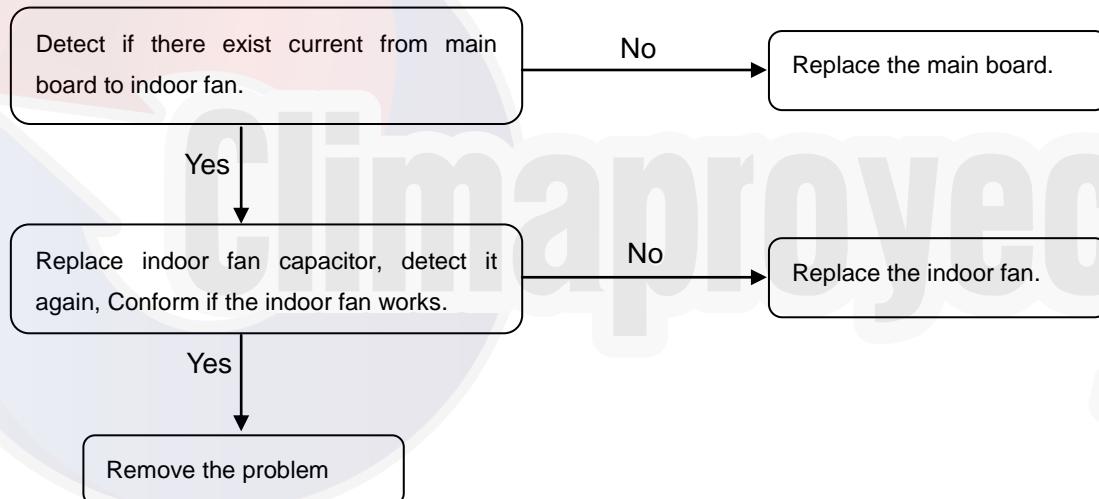

- 1) The wired controller output signal has Y, no G.
- 2) The wired controller output signal has W, no G.
- 3) The wired controller output signal has Y and W, no G.

6). P0: Compressor over current protection.(The over current protection value is 16A)**7). P3: Comprehensive protection for outdoor fan**

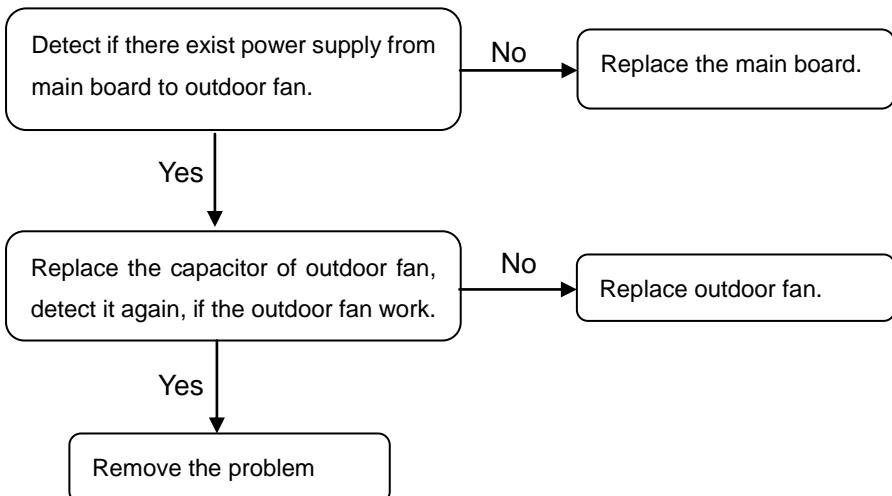

8). P4: Protection for High/Low Pressure or exhaust temp. (High pressure protection value: 4.4MPa, High pressure protection value: 0.14MPa; air discharge temp. protection value: 130°C above)

9). Indoor fan motor didn't work.

10). Outdoor fan motor didn't work.

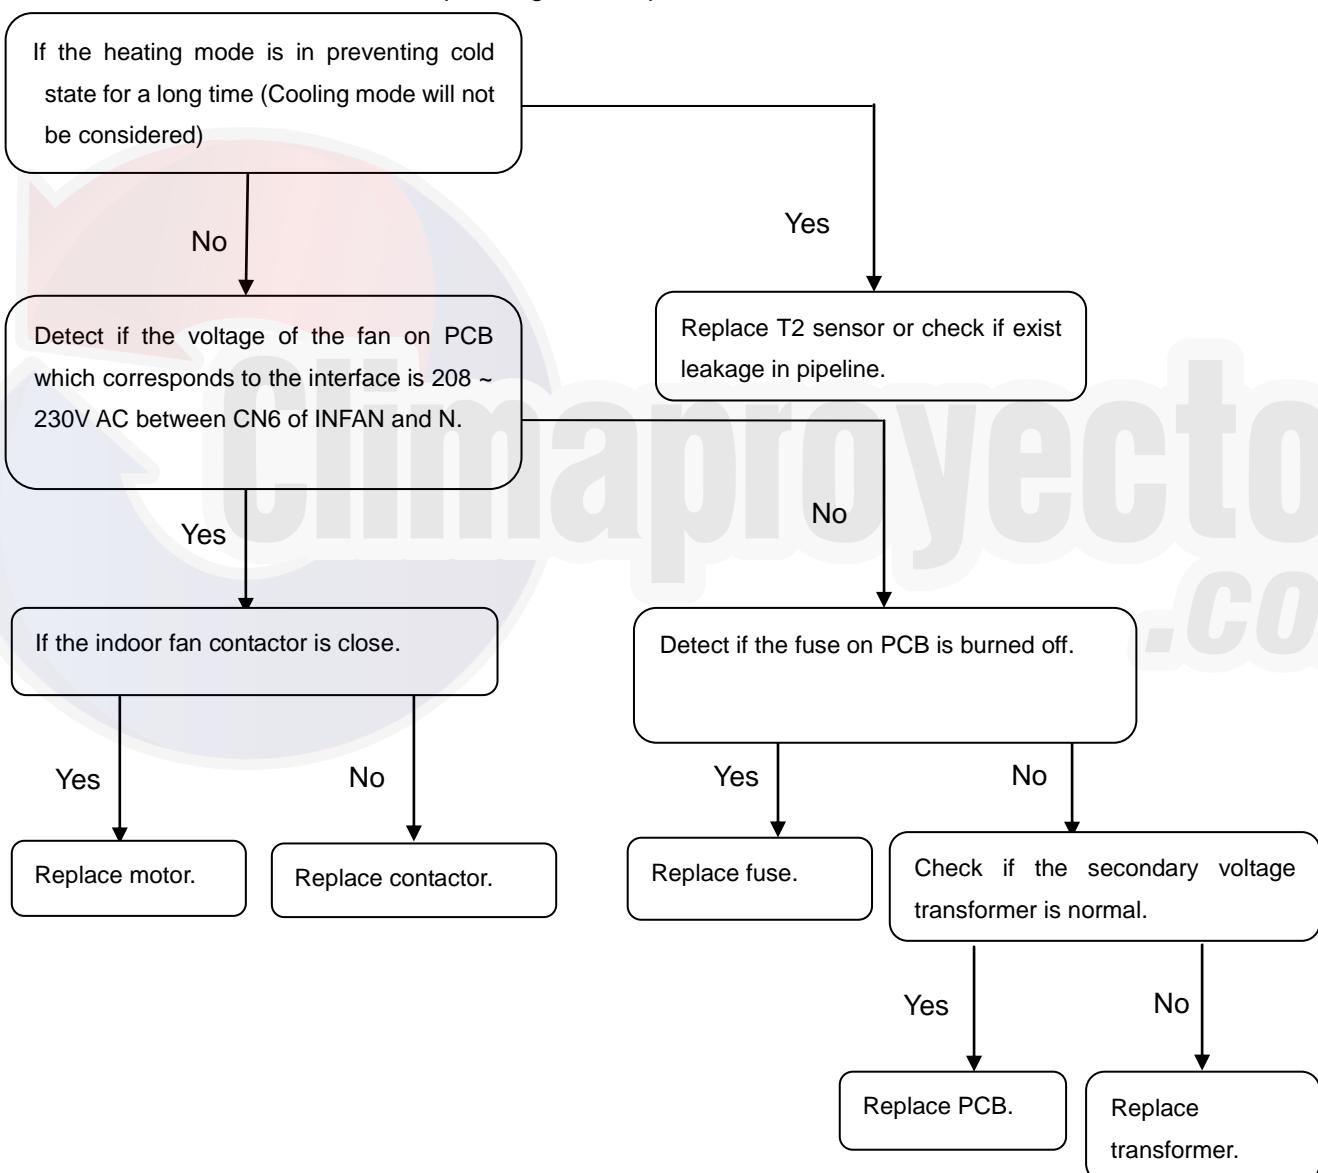

For 6.2ton and above

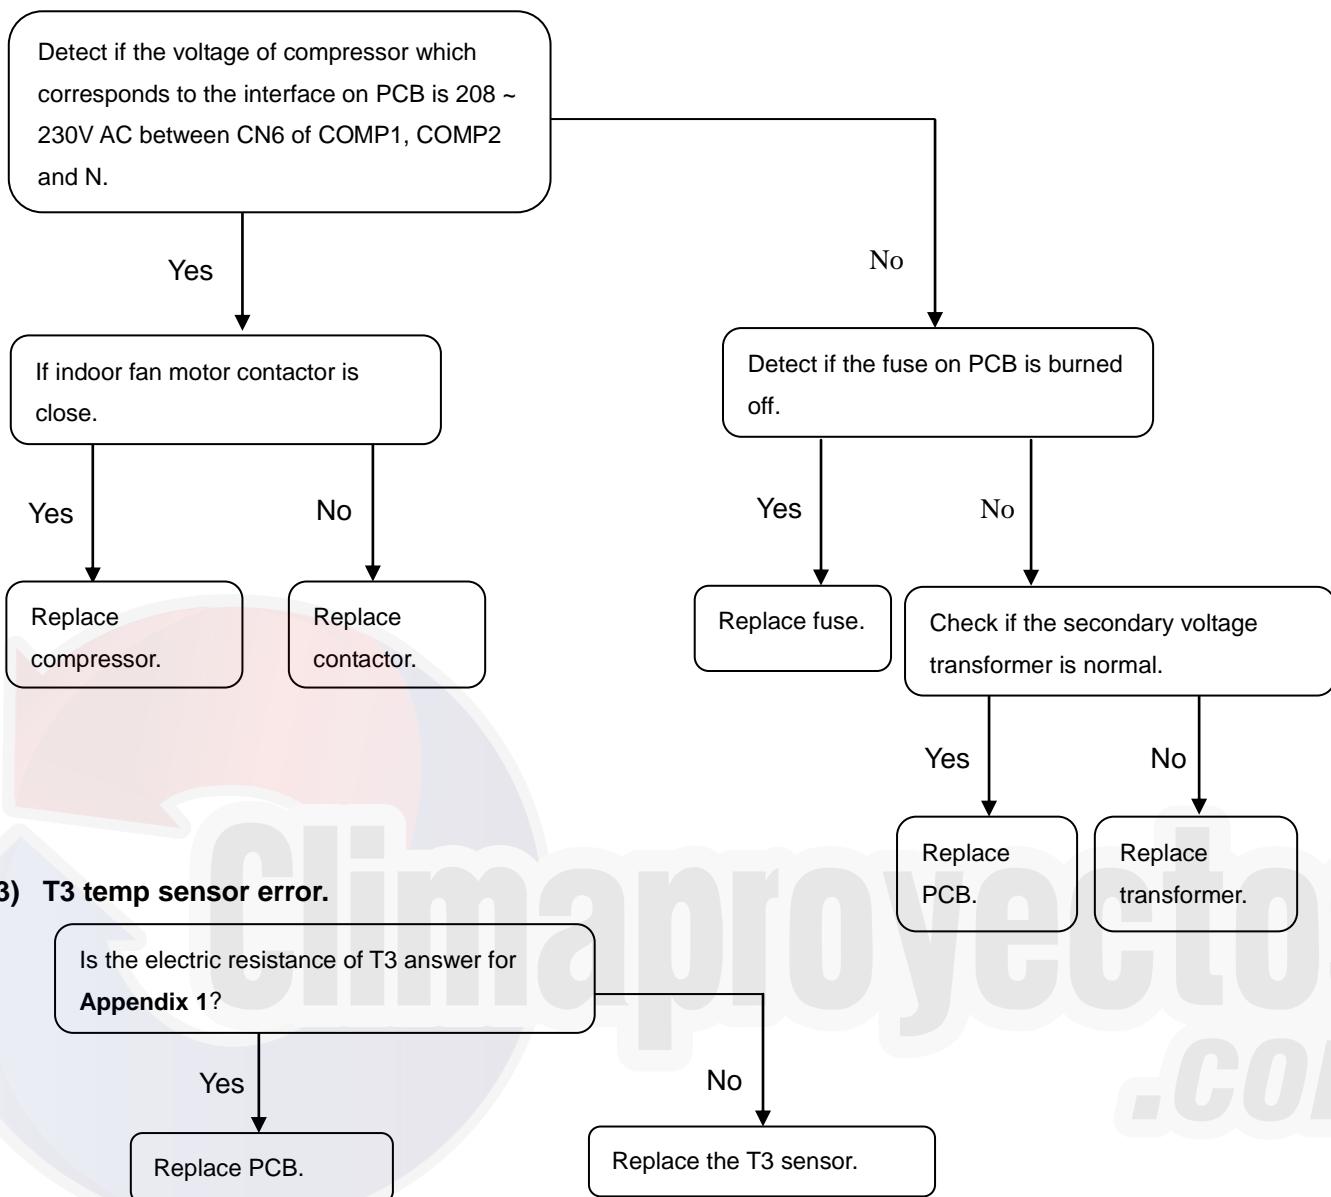

Item	Content	Error code
1	Indoor fan motor didn't run.	--
2	Compressor didn't run.	--
3	T3 temp sensor error.	EA
4	Check if the low pressure protection is normal.	--
5	Outdoor fan motor didn't run.	--
6	Four ways valve didn't work.	--
7	Condenser high temp protection.	P8,P9

1) Indoor fan motor didn't run.

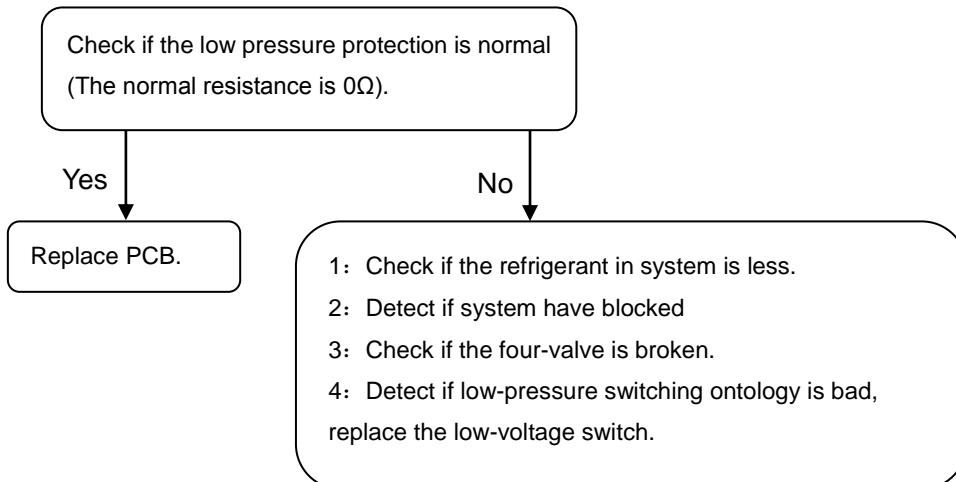

The first check if the power supplier is normal, if all wire connection terminal is loose, if the wired controller set and wire connection are correct, operating as flow process after confirm.

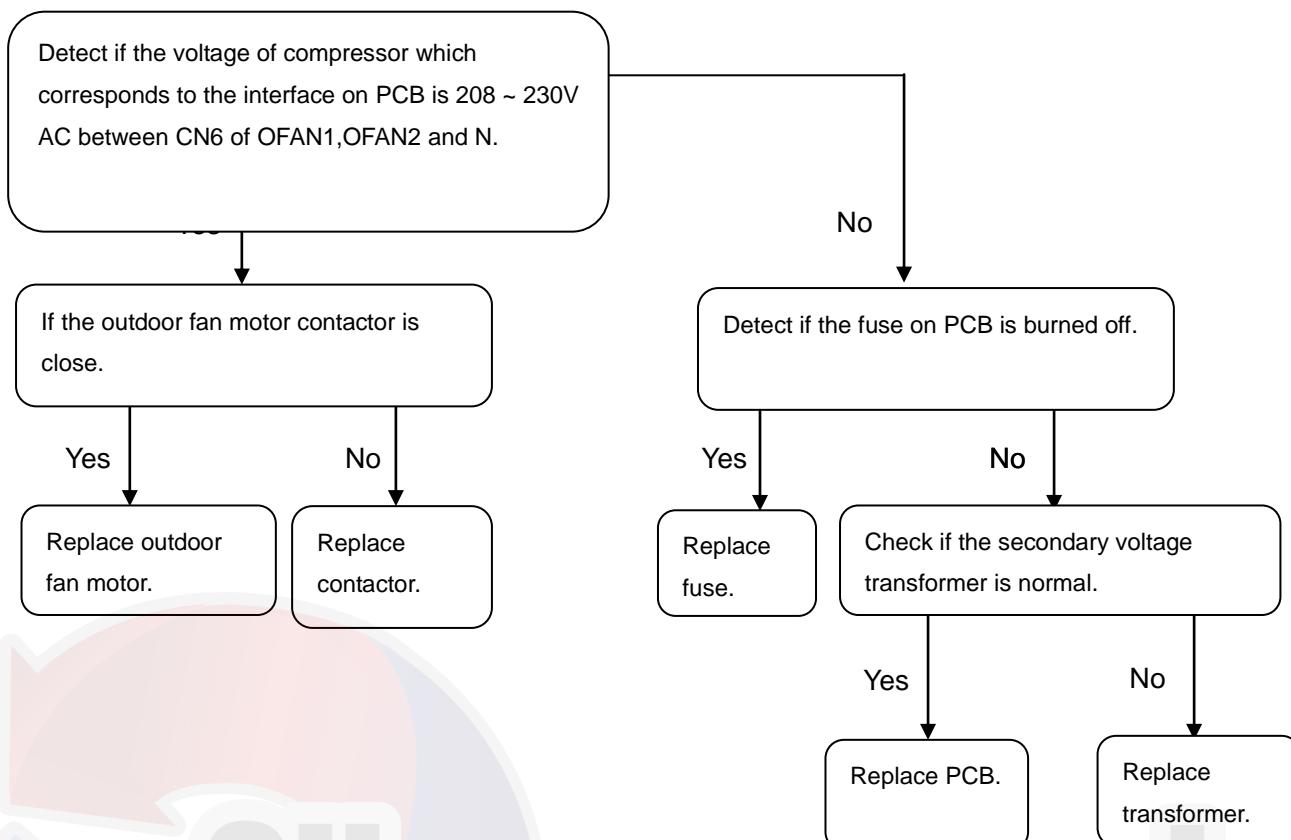

2) Compressor didn't run (All wires connection are correct and reliable, if power supplier is required range. If compressor didn't run, you can analysis as flowing)

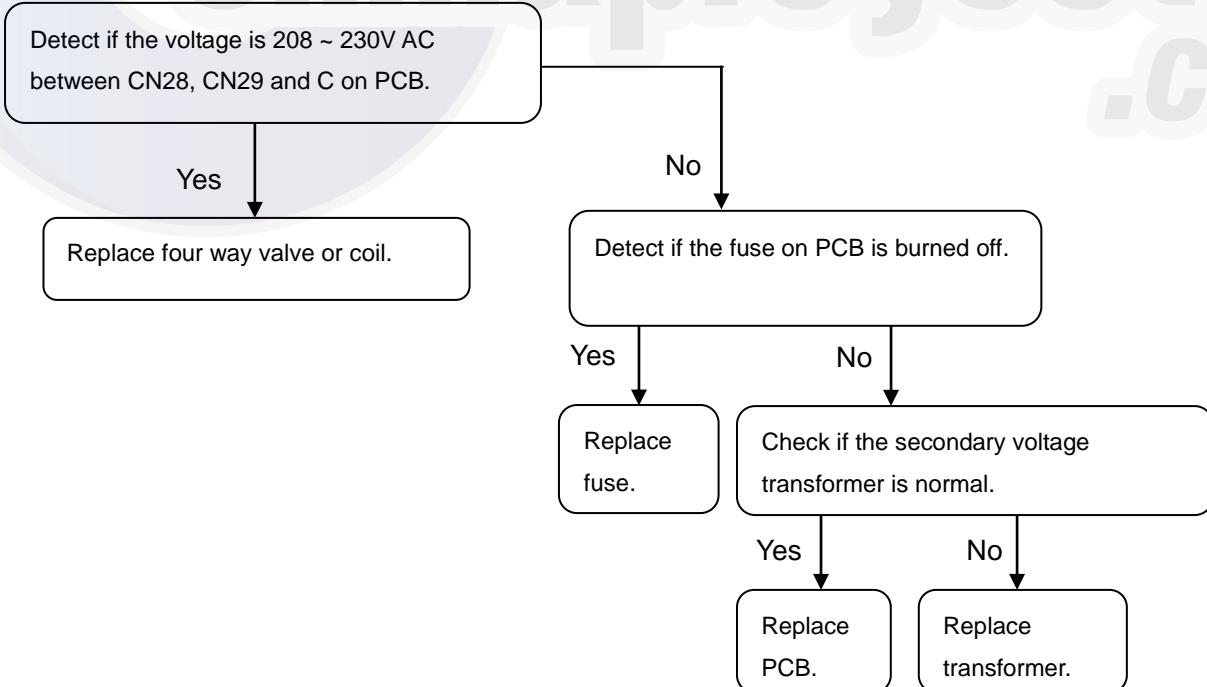

4) Check if the low pressure protection is normal.

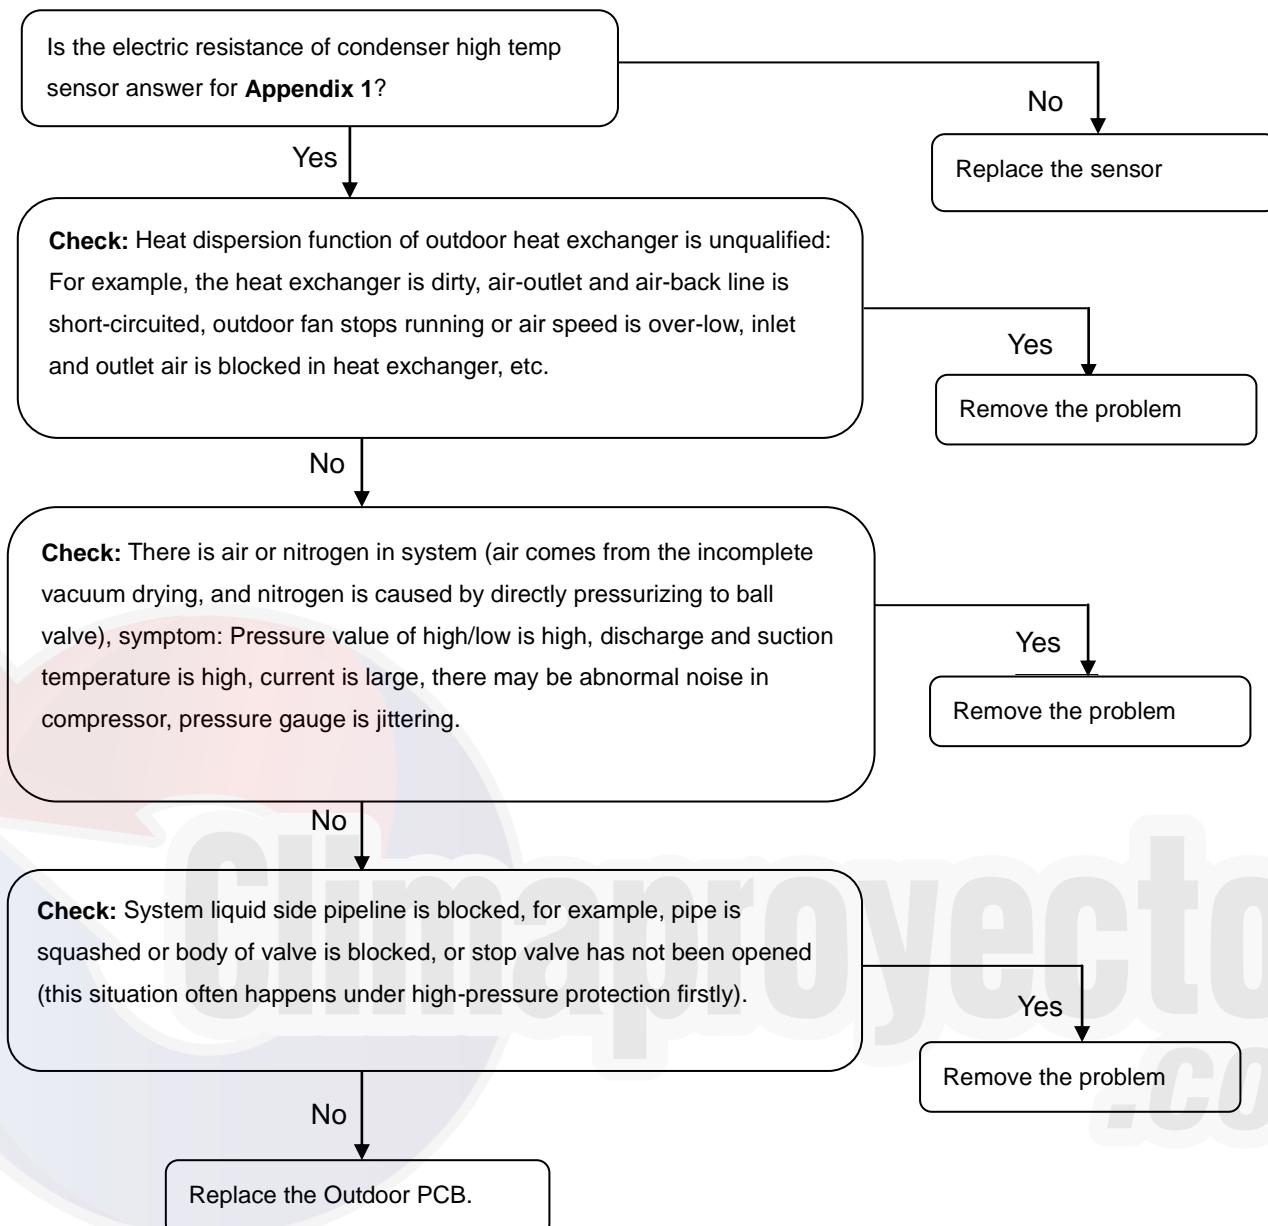

5) Outdoor fan motor didn't run.

6) Four ways valve didn't work.

7) Condenser high temperature protection

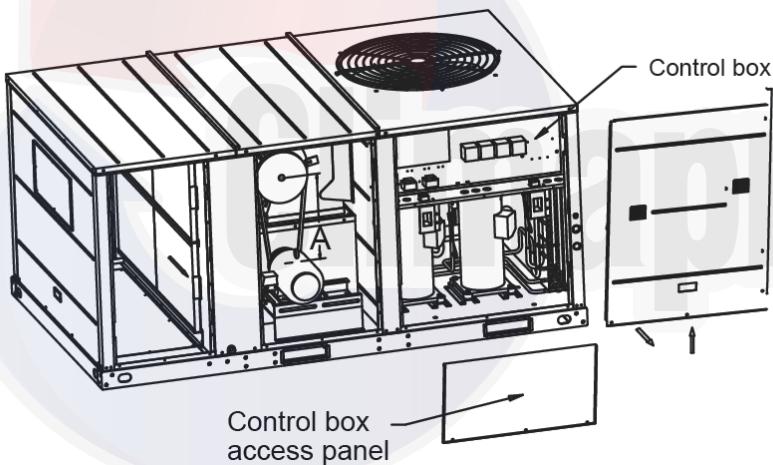

17. Accessory

Name of accessories	Qty	Shape
Manual	1	—
Drain outlet	1	
Snap ring	1	
Drain pipe	1	
KJR-12B Wired controller	1	

18. Maintenance and Upkeep

Regular maintenance and upkeep

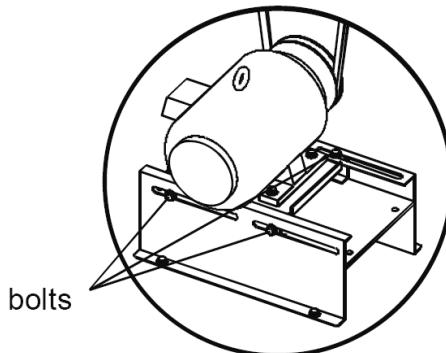

Some regular maintenance and upkeep have been carry on by user, includes: change the one-time dust filter, clean casing, wash condenser and replace a new belt, as well as do some test for the equipment.

Model	A
6.2 Ton	328mm
7.5 Ton	328mm
8.5Ton	395mm
10 Ton	395mm
12.5Ton	620mm
15 Ton	576mm
17.5 Ton	576mm
20 Ton	525mm

Note: At least 1m flame resistant layer must be laid at the end of the air duct internal surface.

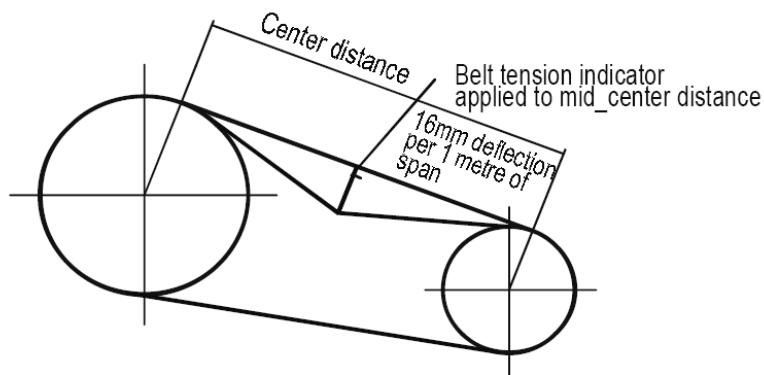

Regulating belt of rate of tension, inner fan Refer to the following Fig. fixed bolt of electric motor's supporting slide was loosened, following electric motor was droved, rate of belt tension will begin change.

Method of belt tensioning using belt tension indicator

Calculate the deflection in mm on a basis of 16mm per meter of center distance

Center distance (m) $\times 16$ =deflection (mm).

Belt section	For required deflection belt 16 mm per meter of span		
	Small pulley diameter (mm)	Newton (N)	Kilogram-force (kgf)
SPA	80 to 132	25 to 35	2.5 to 3.6
SPB	140 to 224	45 to 65	4.6 to 6.6

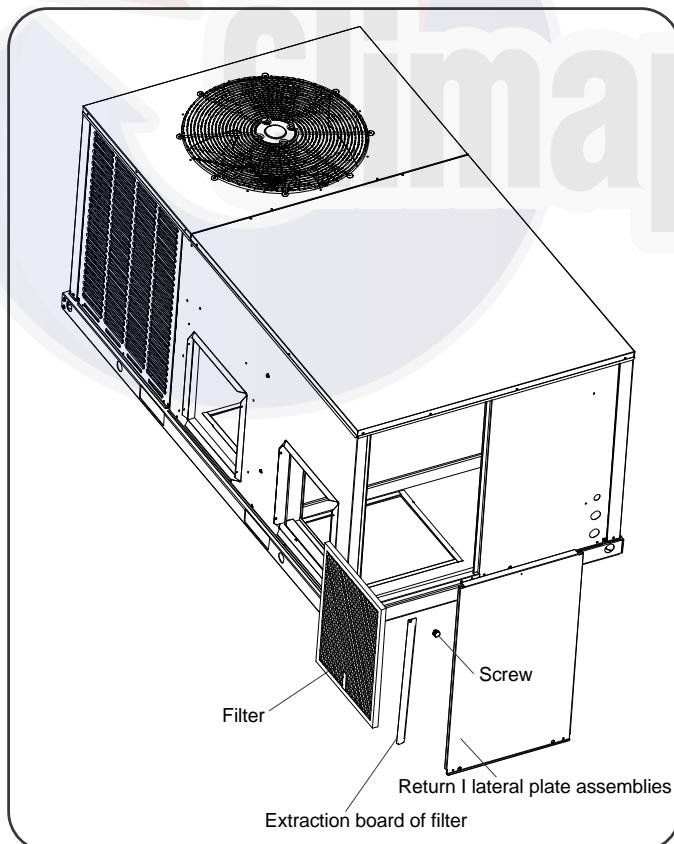

NOTE: The belt which is too tight or too loose may generate noise and be harmful to the unit.

Dismantle the air filter.

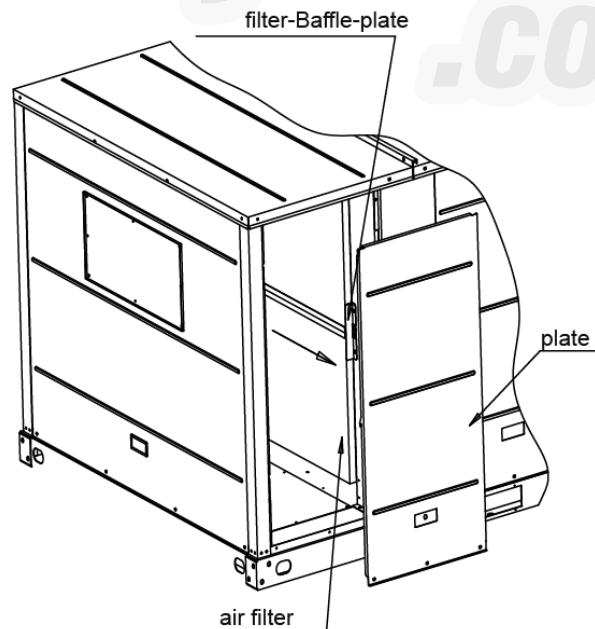

Twist of screws and up the plate that is gets out.

Upon loose the filter-baffle-plate, the filter could be pulled out along the supporting slot.

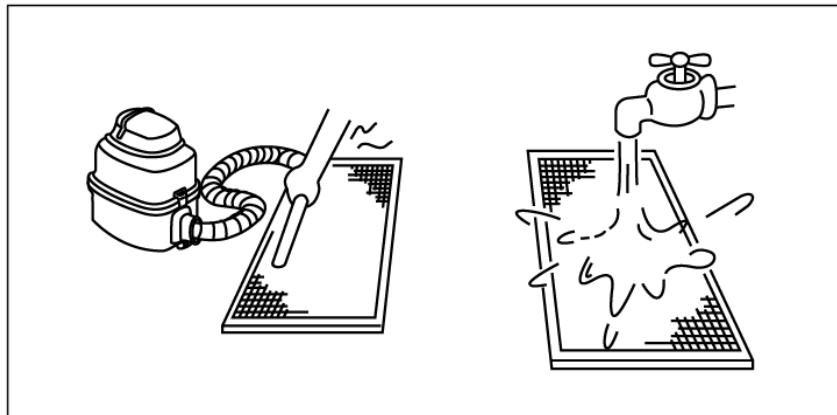

5ton

6.2ton and above

Clean the air filter (Vacuum cleaner or pure water may be used to clean the air filter. If the dust accumulation is too heavy, please use soft brush and mild detergent to clean it and dry out in cool place).

The air-in side should face up when using vacuum cleaner.

The air-in side should face down when using water.

CAUTION: Do not dry out the air filter under direct sunshine or with fire.

Re-install the air filter

Condenser coil

Unfiltered air circulates through the unit's condenser coil and can cause the coil's surface to become clogged with dust, dirt, etc. To clean the coil, vertically (i.e., with the fins) stroke the coil surface with a soft-bristled brush. Be sure to keep all vegetation away from the condenser coil area.

Maintenance performed by serviceman.

To keep your unit operating safely and efficiently, the manufacturer recommends that a qualified serviceman check the entire system at least once each year and any other time that you feel one is needed. Your serviceman should examine these areas of your unit:

Filters

Motors and drive system components

Economizer gaskets (for possible replacement)

Safety controls (for mechanical cleaning)

Electrical components and wiring (for possible replacement and connection tightness)

Condensate drain (for cleaning)

Unit duct connections (to see that they are physically sound and sealed to the unit casing)

Unit mounting support (for structural integrity)

The unit (for obvious unit deterioration)

CAUTION:

Do not operate the unit without the evaporator fan access panel in place. Reinstall the access panel after performing any maintenance. Operating the unit without the access panel may result in severe personal injury or death.
